1.Feature

Four-way cassette type air conditioner (Cooling-only or heat pump), is installed under the ceiling, compared with Floor &Standing type A/C, it has following advantages: saving room space; Ceiling installation combining with the decoration, makes the room more elegant; Flexible installation in anywhere in the ceiling and 4-direction blowing, makes the indoor temperature is even and makes you feel more comfortable, so Cassette type A/C is a perfect replacing Product of Floor & Standing type A/C.

Application occasions:

Small super market, restaurant, office, meeting room, villa meeting room, family bedroom and so on, and it can even be used as the updating Product for modern residential A/C.

Features:

- ♦ Concealed design, ceiling installation, room space saving, it is very suitable for family or office occasion:
- With Setting or Auto two operation modes, four-way blowing, strong circulating wind, multi wind speed, the cooling or heating capacity can reach to each corner of the room;
- One-step formed shell by mold, appearance is elegant;
- Special insulation design, achieves high heat insulation efficiency, and no condensation on shell;
- ⟨Built-in drain pump, drain-head height is up to 1.2meters, creating the ideal solution for perfect water drainage, also construction and installation is much easier and convenient;
- Long term air filter, wash period is two times longer than normal filter, and maintenance is free;
- ♦ D helix air blade ensures the air flow sufficiently, reduces the unit thickness, and reduces the operation noise greatly;
- ◇Plastic drip tray adopts innovative foam-PS combined with plastic technical, the thickness of plastic reaches 1mm, avoid any leakage;
- \$\iflooksigma\$ segments heat exchanger, increase exchanging area, the efficiency of heat exchanging increased by 10%~15%:
- ♦ Ingenious hook design, the panel is convenient to install or remove;
- ♦ Fresh air intake design, leading in fresh at to improve indoor air quality anytime;
- ♦3-phase power supply type units with low ambient temperature cooling function, which makes the unit can run normally on the condition that the ambient temperature falls down to -15°C;
- ♦ Auto-restart function;
- ♦ Standard remote controller and optional wired controller;
- ♦ Auxiliary electric heater for heat pump unit, with fast heating and low ambient temperature heating functions:
- ♦ Failure automatic detection, if there is a failure, the indicator will flash and the failure code will display on the wired controller, the failure cause is easier to be found.

3. Capacity Amendment

3.1 Running range

Cooling capacity (Btu/h)		12000	12000 18000 24000 36000 48000					
Power supply			220-240V~/50Hz					
Voltage			187~242V					
Room temperature		16~32°C						
Ambient temperature	-15~49°C							
Ambient temperature	Heating	-15~24°C						

3.2 Amendment coefficient of cooling capacity under different indoor/outdoor DB/WB temperature

	air inlet ature°C	Outdoor air inlet DB temperature°C							
DB	WB	25	30	35	40	43	45	47	49
23	16	0.98	0.94	0.89	0.85	0.82	0.79	0.74	0.71
25	18	1.05	1	0.95	0.90	0.87	0.82	0.77	0.72
27	19	1.1	1.05	1	0.95	0.91	0.87	0.84	0.79
28	20	1.12	1.07	1.02	0.96	0.93	0.90	0.86	0.81
30	22	1.19	1.13	1.08	1.02	0.99	0.96	0.91	0.88
32	24	1.26	1.20	1.15	1.08	1.05	1.02	0.97	0.92

Actual cooling capacity calculation:

Actual cooling capacity=amendment coefficient of cooling capacity x nominal cooling capacity

- ----nominal cooling capacity could be found from the performance parameters list
- ——amendment coefficient of cooling capacity could be found from table above.

Amendment coefficient of heating capacity under different indoor/outdoor DB/WB temperature

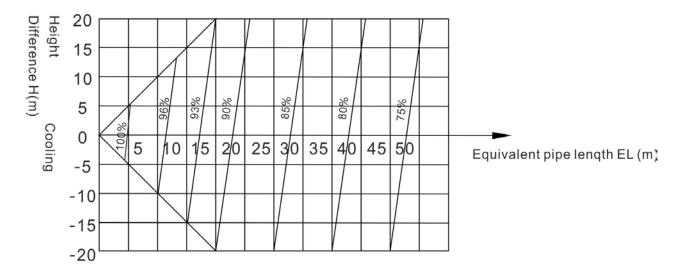

Indoor air inlet DB		Outdoor air inlet WB temperature °C					
temperature °C	-15	-10	-5	0	6	10	15
16	0.45	0.53	0.65	0.80	1.02	1.13	-
18	0.47	0.55	0.61	0.76	1.02	1.12	-
20	0.46	0.54	0.6	0.75	1	1.11	1.25
21	0.42	0.49	0.59	0.72	0.99	1.1	1.24

24	0.39	0.45	0.56	0.7	0.96	1.08	1.22

Actual heating capacity calculation:

Actual heating capacity=amendment coefficient of heating capacity x nominal heating capacity

- ——nominal heating capacity could be found from the performance parameters list
- ——amendment coefficient of heating capacity could be found from table above.

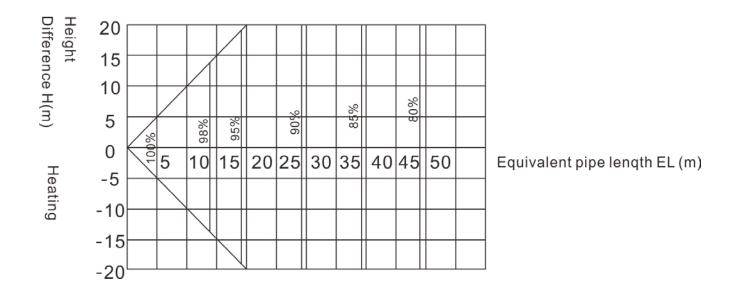

Amendment coefficients of heating and cooling capacity under different height drop Different Cooling Capacity modified coefficients at different height:

Note:

H = Height of Outdoor Unit - Height of Indoor Unit

Different Heating Capacity modified coefficients at different height:

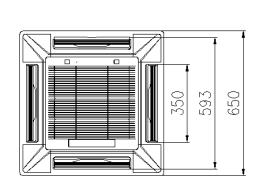

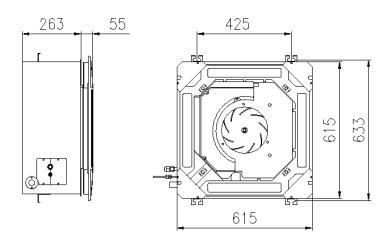

Note:

H = Height of Outdoor Unit — Height of Indoor Unit

Introduction of Control Board QRDL-3F(2S)-SYE1 (indoor unit) (match with the outdoor unit which the Power supply is 220V-240V, 1PH)

Introduction of control board QRD-SN3F(EX)-SYE1 sockets (Indoor unit) (match with the outdoor unit which the Power supply is 380V-415V, 3PH)

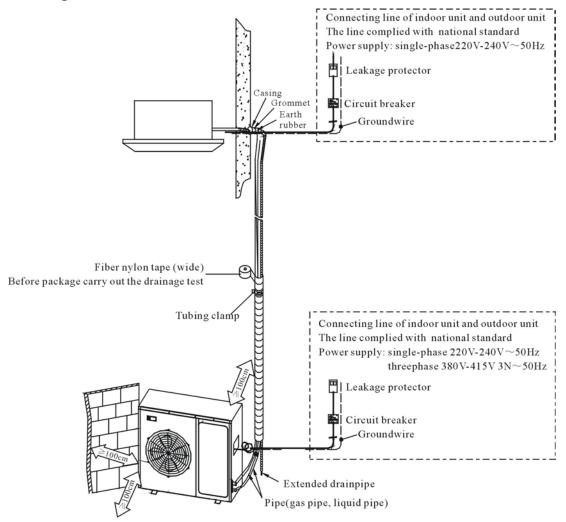

6.Installation

6.1 Preparation before installation

Please buy following spare parts from your local market	Besides general implements, other implements are needed				
before installation	when connecting the pipe				
Hung bolts M12, 4 pcs	Acetylene cylinders, oxygen cylinders (when longer pipe				
Truing boils W12, 4 pcs	used it should be welded)				
Drainage pipe PVC	One set pipe cut machine. (cut copper pipe)				
Copper connecting pine	Refrigerant cans, electronic balance (when longer pipe				
Copper connecting pipe	used additional gas should be charged)				
Adheniya halt (hig siza) E pag (amall siza) E pag	Pressure gauges, pipe clamp, welding torch, 2B silver				
Adhesive belt (big size) 5 pcs, (small size) 5 pcs	electrode				
Heat insulation material used to connect copper pipe	Wrench 2 pcs, one of them is with adjustable torque wrench				
(PE foam material, its thickness is more than 8mm)	(42N.m,65N.m,100N.mm)				
Power cable, electrical wire between indoor and outdoor	Nitrogen cylinder (in order to prevent oxidation when				
unit(Must be in accordance with the wire diameter in the	welding, using Nitrogen to replace the air)				
wiring diagram)	welding, daing Millogen to replace the all)				

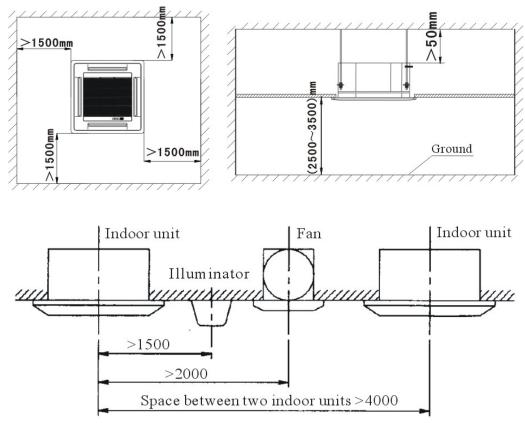

6.2 Installation diagram

6.3 Installation precaution

- ♦ Hanging location should be able to support the unit's weight, there should be no increase in noise and vibration. If the hanging location needs reinforcement, it should be reinforced before installation;
- ♦ Choose the space above the ceiling that can put the indoor unit inside;
- ♦ The location should be easy for drainage;
- ♦ The unit should not be installed in the heat source, steam source oil mist places (such as machine room, kitchen, laundry room, mechanical workshop, etc.) in order to avoid performance degradation, electric shock, plastic parts corrosion which lead to unit broken;
- ♦ Choose the location at least 1 meter away from TV and radio, in order to avoid interference to them
- ♦ There is no obstacles getting in the way of air circulation, cold air can evenly spread to all corners of the room;
- ♦ In order to facilitate maintenance and repair, there should be certain distance between indoor unit and obstacles:
- Refrigerant R22 is used for this unit, which is non-flammable and non-toxic gas. As the proportion of refrigerant is bigger than air, so if it leaks the gas will be filled on the ground. Therefore, if the units mounted on a closed room there must be good ventilation to prevent suffocation. In case of leakage of refrigerant, units should immediately stop running, and contact with maintenance personnel in time. There must be no fire at the site, because the refrigerant will turn to harmful gas when get to the fire.

6.4 The distance between indoor unit and obstacle

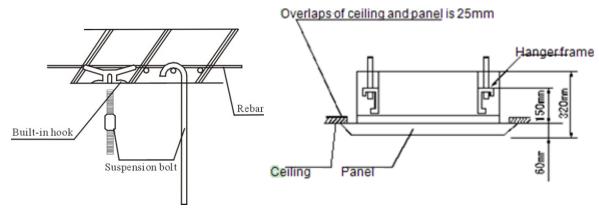

6.5 Indoor unit suspension

♦ Select the suspension foundation:

The suspension foundation is a structure of either wooden frame or reinforced concrete. It must be

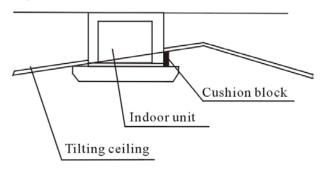

firm and reliable to bear at least 4 times weight of itself and capable of bearing vibration for long periods.

- ♦ Fixing of suspension foundation:
- ♦ Fix the suspension bolts either as shown in the picture or by a steel or wooden bracket.

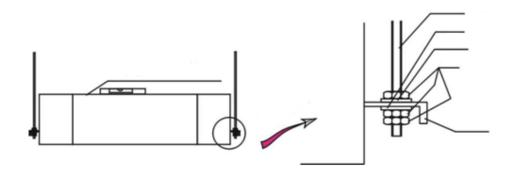

♦ If this unit is installed on a sloping ceiling, a cushion block should be installed between the ceiling and the air outlet panel, in order to ensure that the unit is installed on a level surface.

This is as shown in the drawing as follows:

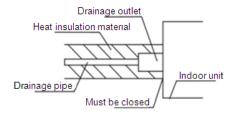

- ♦ Adjust the relative position of the suspension hook on the suspension bolt so that the unit can be in level position in all directions. Check with a level gauge after the installation is complete in order to ensure that the indoor unit is horizontal, otherwise it will cause water leakage, air leakage etc.
- ♦ Tighten the bolt and ensure that four hooks are in close contact with the nuts and washers, and the unit is suspended firmly and reliably onto the hooks.
- ♦ After the unit is installed ensure it is secure and does not shake or sway.
- Ensure that the centre of the indoor unit is in alignment with the centre of the opening in the ceiling.

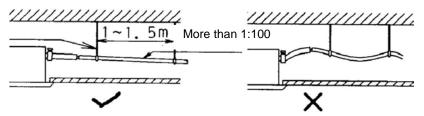

6.6 Drainage pipe installation

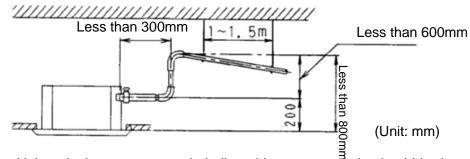

The drain pipe should be properly insulated to prevent the generation of condensation. Heat insulation material: the thickness of rubber insulation pipe should be more than 8mm

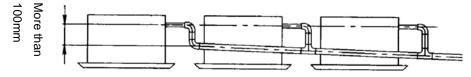

◇ Drainage pipe must have a downward gradient (1 / 50 1 / 100). If the drain pipe is installed ups and downs, it will cause water backflow or leakage etc.

♦ The unit has a drain pump which will lift up to 1200mm. However after the pump stops the water still in the pipe will drain back and may overflow the drain tray causing a water leak. For this reason please install the drain pipe as shown

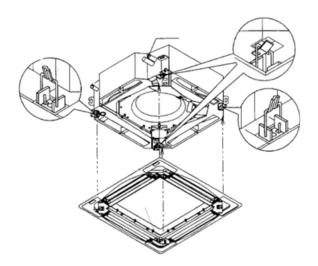

♦ When draining multiple units into a common drain line, this common drain should be installed about 100mm below each units drain outlet, as shown in the drawing.

When finish installation please carry out the drainage test to ensure that the water flow through the pipeline fluently, and carefully observe the junction to ensure that there is no water leakage. If the unit is installed in the newly built house, strongly recommend that this test taken before the ceiling installation. Even it is the heating only unit, this test is unavoidable.

6.7 Panel installation

As to the MB12 panel please refer to the following picture, the panel has four hooks which attach to corresponding hangers on the unit and the panel should be positioned using these first. The panel is then fixed into position by four bolts which are accessed through the four corner panels on the grille.

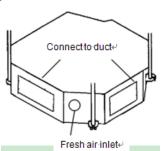

Notes:

When installing please ensure that the position of swing motor is in accordance with the position of the pipes of the unit.

6.8 Connect duct, fresh air ventilation

In order to meet different customers' requirements and their different usage environment, 3hp and 5hp indoor unit reserves one fresh air ventilation hole and four duct connection holes. The fresh air can be introduced from outside or through duct.

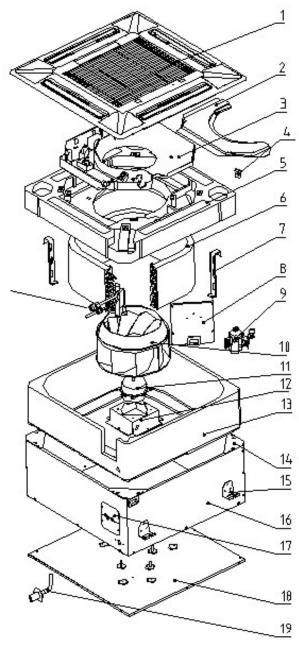

- ♦ Fresh air ventilation: In the corner of the unit there is a circular fresh air connection hole, if users want this feature, please cut down the circular metal sheet and connect it to the duct. Fresh air replacement hole is connected to the return air inlet of the indoor unit, when in the process of operation due to the negative pressure, the fresh air can be introduced from outside.
- Connect to duct: There are four rectangular connection holes on the four sides of the unit. If users what to connect it to the duct, please close the outlet to the side which needs connecting to the duct as well as cut down the rectangular metal sheet.

Notes:

- 1.Only under special usage that it is allowed to connect to duct pipe and the length of the duct pipe should be less than 5 meters.
- 2. Using the duct that can prevent frost and noise.
- 3. Using heat insulation material to seal the junction between duct and the unit.

1.Feature

Ceiling& Foor type A/C (Cooling-only or Heat pump) can be installed under the ceiling and also on the floor. Compared with normal Floor &Standing type A/C, it can be hoisted under the ceiling, saving room space, it is also the updating Product for Floor & Standing type A/C.

Application occasions:

Small super market, restaurant, office, meeting room, villa living room, family bedroom, and it can even be used as the updating Product for modern residential A/C.

Features:

- ♦ Suspended ceiling, installation under ceiling, saving room space, it is very suitable for family or office place;
- ♦ Convenient and flexible for indoor unit installation, can be installed under the ceiling or on the floor;
- With Setting or Auto two operation modes, multi fan speed, makes you feel more comfortable;
- ♦ Shell was formed by mold, and the appearance is "slim", "elegant", "fashion" and "comfortable";
- ♦ Special insulation design, achieves high heat insulation efficiency and no condensation on shell;
- ♦ Long term air filter, the wash period is two times longer than normal filter, maintenance is free;
- ♦ Adopting low noise centrifugal fan, strong wind but quiet operation, the silence design achieves harmony residential living;
- ♦ All the installation and maintenance can be done in the bottom of unit, saving the maintenance space;
- ♦ 3-phase power supply type units with low ambient temperature cooling function, which makes the unit can run normally on the condition that the ambient temperature falls down to -15°C;;
- ♦ Standard remote controller and optional wired controller;
- Auxiliary electric heater for heat pump unit, with fast heating and low ambient temperature heating functions;
- ♦ Failure automatic detection, if there is a failure, the indicator will flash and the failure code will display on the wired controller, the failure cause is easier to be found..
- ♦ Filter to dismantle to wash convenience, don't need to make use of any tool, can move to dismantle to filter a net to clean.
- ♦ Ultra slim design, the thickness only 205 mm, and have vertical and horizontal swing function.

Note:

- 1. Working condition of the cooling capacity measured: Inside the room DB temperature 27°C,WB temperature19°C;Outside of the room DB temperature 35°C,WB temperature 24°C;Working condition of the heating capacity measured:Inside the room DB temperature 20°C,Outside of the room DB temperature 7°C,WB temperature 6°C.
- 2. Parameters above are all measured when the connecting pipe is 5 meters.
- 3. Parameters above may be modified as product improvement. We keep the right to change the product specifications without prior notice, please take the parameters listed on the nameplate as criterion.

3. Capacity amendment

3.1 Running range

Cooling capacity (Btu/h)		12000	12000 18000 24000 36000 48000 60				60000
Power supply	220-240V~/50Hz						
Voltage	187~242V						
Ambient temperature	Cooling	-15~49°C					
Ambient temperature	Heating			-15~	-24°C		

1.2 Amendment coefficient of heating & cooling capacity under different indoor/outdoor DB/WB temperature

Amendment coefficient of cooling capacity under different indoor/outdoor DB/WB temperature

	r air inlet rature°C	Outdoor air inlet DB temperature°C							
DB	WB	25	30	35	40	43	45	47	49
23	16	0.98	0.94	0.89	0.85	0.82	0.79	0.74	0.71
25	18	1.05	1	0.95	0.90	0.87	0.82	0.77	0.72
27	19	1.1	1.05	1	0.95	0.91	0.87	0.84	0.79
28	20	1.12	1.07	1.02	0.96	0.93	0.90	0.86	0.81
30	22	1.19	1.13	1.08	1.02	0.99	0.96	0.91	0.88
32	24	1.26	1.20	1.15	1.08	1.05	1.02	0.97	0.92

Actual cooling capacity calculation:

Actual cooling capacity=amendment coefficient of cooling capacity x nominal cooling capacity

- ——nominal cooling capacity could be found from the performance parameters list
- ——amendment coefficient of cooling capacity could be found from table above.

Amendment coefficient of heating capacity under different indoor/outdoor DB / WB temperature

Indoor air inlet DB		Outdoor air inlet WB temperature °C					
temperature °C	-15	-10	-5	0	6	10	15
16	0.45	0.53	0.65	0.80	1.02	1.13	-
18	0.47	0.55	0.61	0.76	1.02	1.12	-

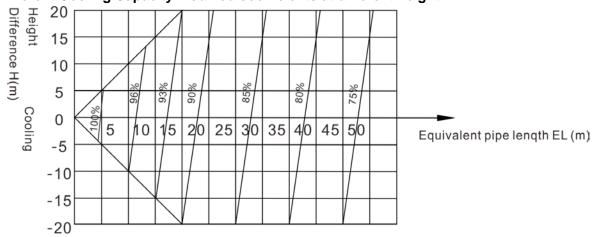

20	0.46	0.54	0.6	0.75	1	1.11	1.25
21	0.42	0.49	0.59	0.72	0.99	1.1	1.24
22	0.41	0.49	0.58	0.71	0.97	1.09	1.23
24	0.39	0.45	0.56	0.7	0.96	1.08	1.22

Actual heating capacity calculation:

Actual heating capacity=amendment coefficient of heating capacity x nominal heating capacity

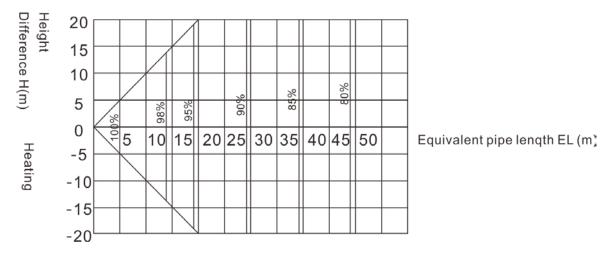

- —nominal heating capacity could be found from the performance parameters list
- ——amendment coefficient of heating capacity could be found from table above.

3.3 Amendment coefficients of heating and cooling capacity under different height drop Different Cooling Capacity modified coefficients at different height:

Note: H = Height of Outdoor Unit — Height of Indoor Unit

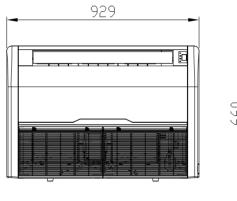

Different Heating Capacity modified coefficients at different height:

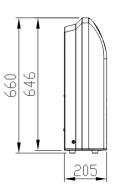

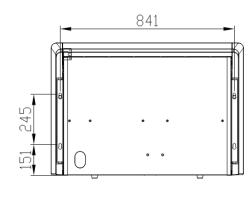

Note: H = Height of Outdoor Unit — Height of Indoor Unit

Introduction of Control Board QRDL-3F(2S)-SYE1 (indoor unit) (match with the outdoor unit which the Power supply is 220V-240V, 1PH)

Introduction of control board QRD-SN3F(EX)-SYE1 sockets (Indoor unit) (match with the outdoor unit which the Power supply is 380V-415V, 3PH)

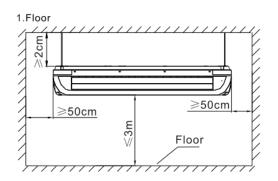

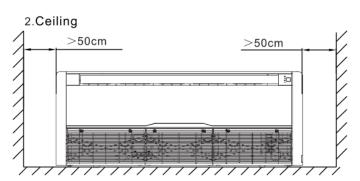

6.Installation

6.1 Preparation and equipments before installation

Please buy following spare parts from your local market	Besides general implements, other implements are needed
before installation	when connecting the pipe
Hung bolts M12, 4 pcs	Acetylene cylinders, oxygen cylinders (when longer pipe used it should be welded)
Drainage pipe PVC	One set pipe cut machine. (cut copper pipe)
Copper connecting pipe	Refrigerant cans, electronic balance (when longer pipe used additional gas should be charged)
Adhesive belt (big size) 5 pcs, (small size) 5 pcs	Pressure gauges, pipe clamp, welding torch, 2B silver electrode
Heat insulation material used to connect copper pipe (PE	Wrench 2 pcs, one of them is with adjustable torque wrench
foam material, its thickness is more than 8mm)	(42N.m,65N.m,100N.mm)
Power cable, electrical wire between indoor and outdoor unit(Must be in accordance with the wire diameter in the wiring diagram)	Nitrogen cylinder (in order to prevent oxidation when welding, using Nitrogen to replace the air)

6.2 The distance between indoor unit and obstacle

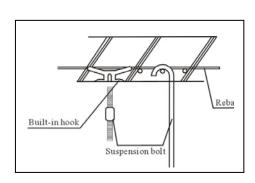

6.3 Indoor unit suspension

- ♦ Select the suspension foundation
- ♦ The suspension foundation is a structure of either wooden frame or reinforced concrete. It must be firm and reliable to bear at least 4 times weight of itself and capable of bearing vibration for long periods; Fixing of suspension foundation
- ♦ Fix the suspension bolts either as shown in the picture or by a steel or wooden bracket;
- Adjust the relative positions of the suspension hooks to ensure the indoor unit is level in all directions. Use a spirit level to ensure this, otherwise water leakage, air leakage etc. will be resulted;

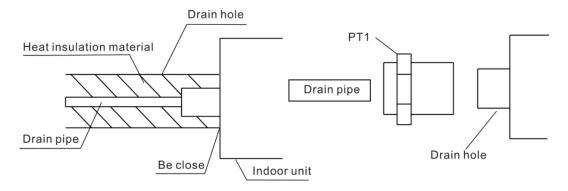

♦ After the unit is installed ensure it is secure and does not shake or sway.

6.4 Drainage pipe installation

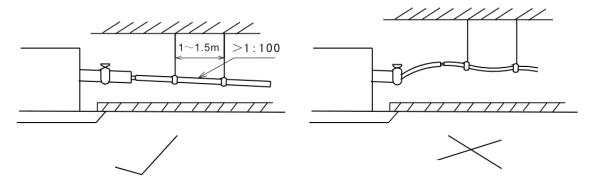

♦ The drain pipe should be properly insulated to prevent the generation of condensation, see picture as follows:

Heat insulation material: rubber insulation pipe with the thickness of more than 8mm

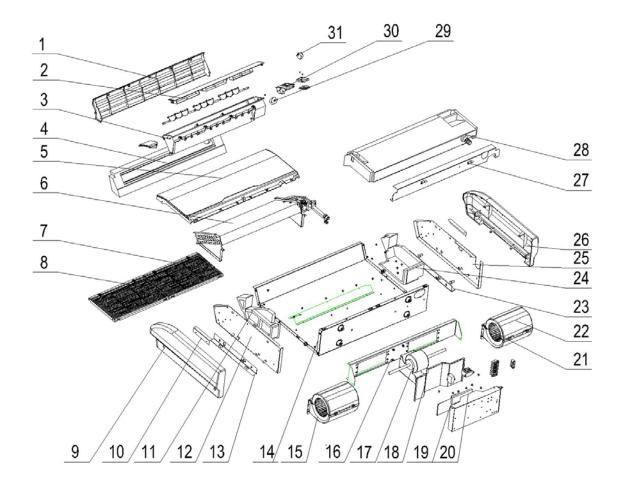

♦ Drainage pipe must have a downward gradient (1 / 50 1 / 100). If the drain pipe is installed ups and downs, it will cause water backflow or leakage etc.

The pipe should not rise at any point.

When finish installation, please carry out the drainage test to ensure that the water flow through the pipeline fluently, and carefully observe the junction to ensure that there is no water leakage at the junction. If the unit is installed in the newly built house, strongly recommend that this test taken before the ceiling installation. Even it is the heating only unit, this test is unavoidable.

1.Feature

Duct type air conditioner (Cooling-only or Heat pump), named for the Duct can be installed to connect with air outlet and inlet. According to different ESP, it divides into Low ESP Duct type (12~30Pa), Medium ESP Duct type (50~80Pa) and high ESP Duct type (higher than 80Pa).

Application occasions:

Small super market, hotel, restaurant, office, meeting room and so on.

Features:

- Conceal design, the unit is installed inside of ceiling, doesn't take room space, suitable for family and office place;
- ♦ With Setting or Auto two operation modes, multi speed wind, makes you feel more comfortable;
- ♦ There are red and white two teminals for motor wiring, users can adjust the ESP by changing the terminals to meet different requirements, simple and convenient; Low ESP Duct is 12/30Pa, and Medium ESP Duct is 50/80Pa, the default setting is 12/30Pa;
- ♦ Special insulation design, achieces high heat insulation efficiency, and no condensation on shell;
- ♦ Low noise centrifugal fan, strong wind but quiet operation;
- ♦ 3-phase power supply type units with low ambient temperature cooling function, which makes the unit can run normally on the condition that the ambient temperature falls down to -15°C;
- Auto restart:
- ♦ Standard wired controller and optional remote controller;
- Auxiliary electric heater for heat pump unit, with fast heating and low ambient temperature heating functions;
- ♦ Failure automatic detection, if there is a failure, the indicator will flash and the failure code will display on the wired controller, the failure cause is easier to be found.

3. Capacity amendment

3.1 Running range

Cooling capa	18000 24000 36000 48000 60000				60000	
Power s	220~240V/50Hz					
Volta	187~242V					
Ambient	Cooling	-15~49°C				
temperature	Heating	-15~24°C				

3.2 Amendment coefficient of cooling capacity under different indoor/outdoor DB and WB

Indoor air inlet temperature°C		Outdoor air inlet DB°C									
DB	WB	25	30	35	40	43	45	47	49		
23	16	0.98	0.94	0.89	0.85	0.82	0.79	0.74	0.71		
25	18	1.05	1	0.95	0.90	0.87	0.82	0.77	0.72		
27	19	1.1	1.05	1	0.95	0.91	0.87	0.84	0.79		
28	20	1.12	1.07	1.02	0.96	0.93	0.90	0.86	0.81		
30	22	1.19	1.13	1.08	1.02	0.99	0.96	0.91	0.88		
32	24	1.26	1.20	1.15	1.08	1.05	1.02	0.97	0.92		

Actual cooling capacity calculation:

Actual cooling capacity=amendment coefficient of cooling capacity × nominal cooling capacity

- ——nominal cooling capacity could be found from the performance parameters list
- ——amendment coefficient of cooling capacity could be found from table above.

3.3 Amendment coefficient of heating capacity under different indoor/outdoor DB and WB

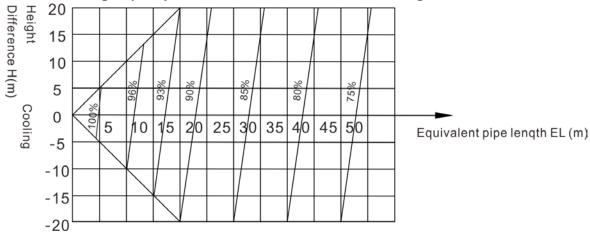

la de en ele la la CDD00	Outdoor air inlet WB°C									
Indoor air inlet DB°C	-15	-10	-5	0	6	10	15			
16	0.45	0.53	0.65	0.80	1.02	1.13	-			
18	0.47	0.55	0.61	0.76	1.02	1.12	-			
20	0.46	0.54	0.6	0.75	1	1.11	1.25			
21	0.42	0.49	0.59	0.72	0.99	1.1	1.24			
22	0.41	0.49	0.58	0.71	0.97	1.09	1.23			
24	0.39	0.45	0.56	0.7	0.96	1.08	1.22			

Actual heating capacity calculation:

Actual heating capacity=amendment coefficient of heating capacity x nominal heating capacity

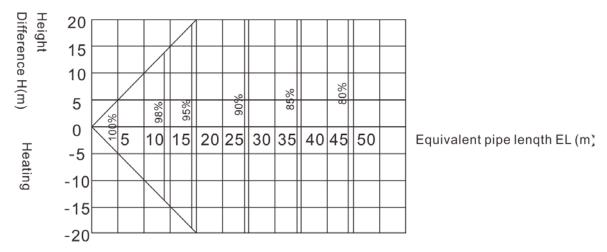

- ----nominal heating capacity could be found from the performance parameters list
- ——amendment coefficient of heating capacity could be found from table above.

3.4 Amendment coefficients of heating and cooling capacity under different height drop Different Cooling Capacity modified coefficients at different height:

Note: H = Height of Outdoor Unit — Height of Indoor Unit

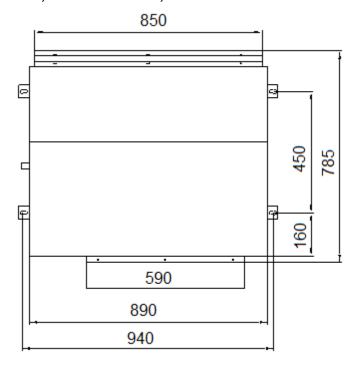

Different Heating Capacity modified coefficients at different height:

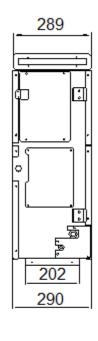

Note: H = Height of Outdoor Unit - Height of Indoor Unit

7.Installation

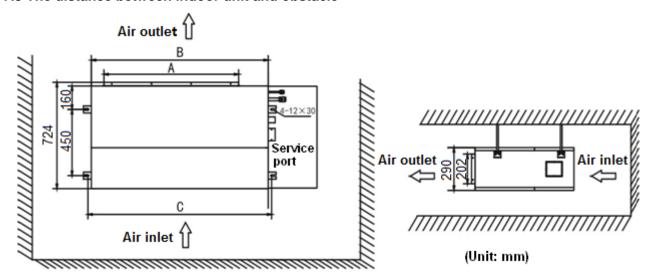

7.1 Preparation and equipments before installation

Please buy following spare parts from your local market	Besides general implements, other implements are needed		
before installation	when connecting the pipe		
Hung bolts M12, 4 pcs	Acetylene cylinders, oxygen cylinders (when longer pipe		
Fiding boits W12, 4 pcs	used it should be welded)		
Drainage pipe PVC	One set pipe cut machine. (cut copper pipe)		
Copper connecting pine	Refrigerant cans, electronic balance (when longer pipe		
Copper connecting pipe	used additional gas should be charged)		
Adhesive belt (big size) 5 pcs, (small size) 5 pcs	Pressure gauges, pipe clamp, welding torch, 2B silver		
Adhesive belt (big size) 3 pcs, (small size) 3 pcs	electrode		
Heat insulation material used to connect copper pipe	Wrench 2 pcs, one of them is with adjustable torque wrench		
(PE foam material, its thickness is more than 8mm)	(42N.m,65N.m,100N.mm)		
Power cable, electrical wire between indoor and outdoor	Nitrogen cylinder (in order to prevent oxidation when		
unit(Must be in accordance with the wire diameter in the			
wiring diagram)	welding, using Nitrogen to replace the air)		

7.2 Indoor unit installationprecaution

- ♦ Hanging location should be able to support the unit's weight, there should be no increase in noise and vibration. If the hanging location needs reinforcement, it should be reinforced before installation;
- ♦ Choose the space above the ceiling that can put the indoor unit inside;
- ♦ The location should be easy for drainage;
- The unit should not be installed in the heat source, steam source oil mist places (such as machine room, kitchen, laundry room, mechanical workshop, etc.) in order to avoid performance degradation, electric shock, plastic parts corrosion which lead to unit broken;
- Choose the location at least 1 meter away from TV and radio, in order to avoid interference to them
- There is no obstacles getting in the way of air circulation, cold air can evenly spread to all corners of the room;
- In order to facilitate maintenance and repair, there should be certain distance between indoor unit and obstacles;
- Refrigerant R22 is used for this unit, which is non-flammable and non-toxic gas. As the proportion of refrigerant is bigger than air, so if it leaks the gas will be filled on the ground. Therefore, if the units mounted on a closed room there must be good ventilation to prevent suffocation. In case of leakage of refrigerant, units should immediately stop running, and contact with maintenance personnel in time. There must be no fire at the site, because the refrigerant will turn to harmful gas when get to the fire.

7.3 The distance between indoor unit and obstacle

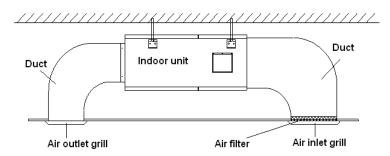

7.4 Indoor unit suspension

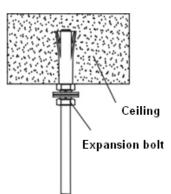

- Select the suspension foundation The suspension foundation is a structure of either wooden frame orreinforced concrete. It must be firm and reliable to bearat least 4 times.
- weight of itself and capable of bearing vibration for long periods;
 Fixing of suspension foundation
 - Fix the suspension bolts either as shown in the picture or by a steel or wooden bracket;
- Adjust the relative positions of the suspension hooks to ensure the indoorunit is level in all directions. Use a spirit level to ensure this, otherwise water leakage, air leakage etc. will be resulted;
- ♦ Tighten the nuts and ensure that the hooks are tightly connected to the nuts and shims, andthere is no phenomenon of virtual hanging;
- ♦ After the unit is installed ensure it is secure and does not shake or sway.

7.5 Duct pipeline installation

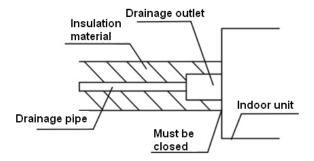

Using canvas to connect between indoor unit and duct pipeline, in order to save unnecessary vibration, as to the detail connection method please refer to the following picture.

7.6 Drainage pipe

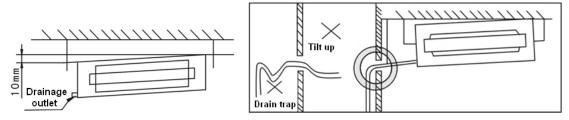

Drainage pipes must be wrapped with heat insulation materials, otherwise it will cause frost or droplets, see picture as follows:

Heat insulation material: rubber insulation pipe with the thickness of more than 8mm

◇ Drainage pipe must have a downward gradient (1 / 50 1 / 100). If the drain pipe is installed ups and downs, it will cause water backflow or leakage etc.

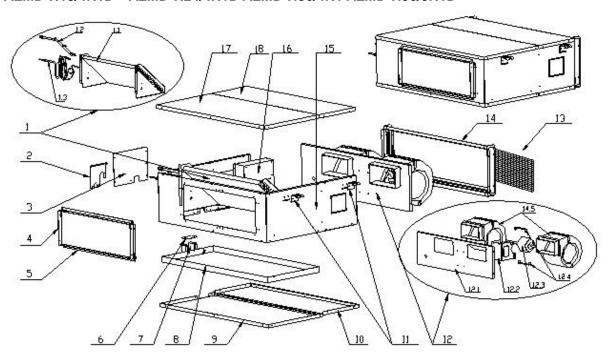

♦ When finish installation please carry out the drainage test to ensure that the water flow through the pipeline fluently, and carefully observe the junction to ensure that there is no water leakage at the junction. If the unit is installed in the newly built house, strongly recommend that this test taken before the CFiling installation. Even it is the heating only unit, this test is unavoidable.

7.7 Remote controller receiver

- ♦ Installation site: recommend that the receiver is mounted with the distance of 30~50 cm to the indoor unit air outlet(on your choice as well), while must ensure that the receiver can get the signal that the remote controller sends, please refer to the following installation picture:
- ♦ Mounting hole set up: please use certain instrument to dig a square hole with 88*88mm on the ceiling
- ♦ Remote controller receiver installation.
- Hold the two sides (with clip sides) of the receiver, set the spring clip in the vertical way then put it into the mounting hole, if the two sides of the receiver is in the same level with the ceiling the installation is finished.
- Signal line connection: connect the wire of remote controller receiver to the CN-DISP terminal board on PCB of indoor unit wire box then fix it.

2. Capacity Amendment

2.1 Running range

Cooling capacity (Btu/h)	12000 18000 24000 36000		36000 48000 60000		60000
Power supply		220-240V~/50Hz		380-415V 3N~/50Hz		0Hz
Voltage		187~242V		320~420V		
Ambient temperature	Cooling	-15~49°C				
Ambient temperature	Heating	-15~24°C				

2.2 Amendment coefficient of cooling capacity under different indoor/outdoor DB and WB temperature

	r air inlet erature°C			Outdoo	r air inlet D	B tempera	ture°C		
DB	WB	25	30	35	40	43	45	47	49
23	16	0.98	0.94	0.89	0.85	0.82	0.79	0.74	0.71
25	18	1.05	1	0.95	0.90	0.87	0.82	0.77	0.72
27	19	1.1	1.05	1	0.95	0.91	0.87	0.84	0.79
28	20	1.12	1.07	1.02	0.96	0.93	0.90	0.86	0.81
30	22	1.19	1.13	1.08	1.02	0.99	0.96	0.91	0.88
32	24	1.26	1.20	1.15	1.08	1.05	1.02	0.97	0.92

Actual cooling capacity calculation:

Actual cooling capacity=amendment coefficient of cooling capacity x nominal cooling capacity

- ----nominal cooling capacity could be found from the performance parameters list
- ——amendment coefficient of cooling capacity could be found from table above.

2.3 Amendment coefficient of heating capacity under different indoor/outdoor DB and WB temperature

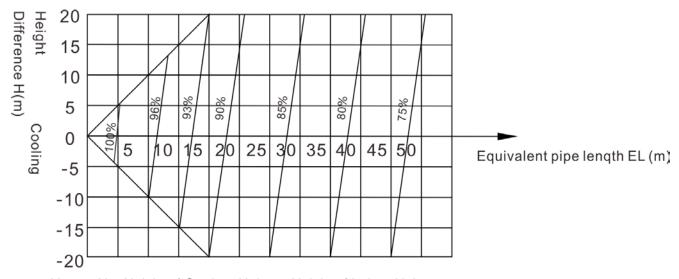

Indoor air inlet DB		Outdoor air inlet WB temperature°C					
temperature°C	-15	-10	-5	0	6	10	15
16	0.45	0.53	0.65	0.80	1.02	1.13	-
18	0.47	0.55	0.61	0.76	1.02	1.12	-
20	0.46	0.54	0.6	0.75	1	1.11	1.25
21	0.42	0.49	0.59	0.72	0.99	1.1	1.24
22	0.41	0.49	0.58	0.71	0.97	1.09	1.23
24	0.39	0.45	0.56	0.7	0.96	1.08	1.22

Actual heating capacity calculation:

Actual heating capacity=amendment coefficient of heating capacity x nominal heating capacity

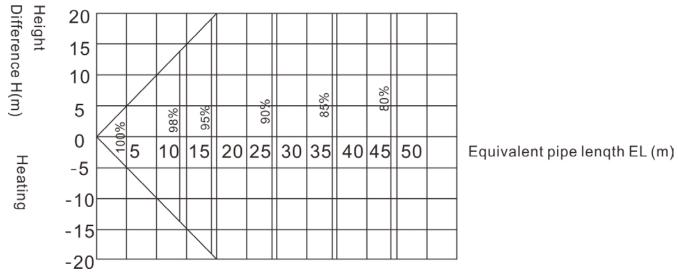

- ——nominal heating capacity could be found from the performance parameters list
- ——amendment coefficient of heating capacity could be found from table above.

2.4 Amendment coefficients of heating and cooling capacity under different height drop Different Cooling Capacity modified coefficients at different height:

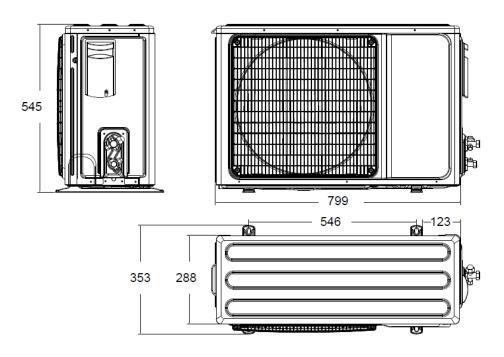

Note: H = Height of Outdoor Unit - Height of Indoor Unit

2.5 Different Heating Capacity modified coefficients at different height:

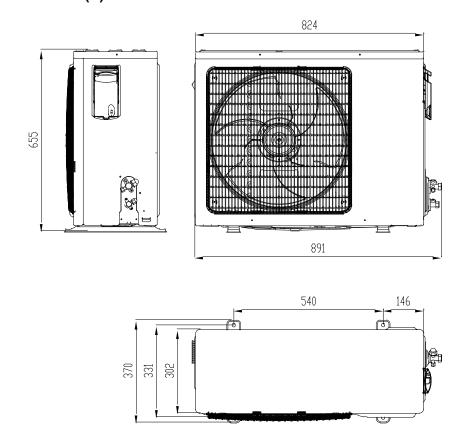

Note: H = Height of Outdoor Unit - Height of Indoor Unit

4. System principle diagram

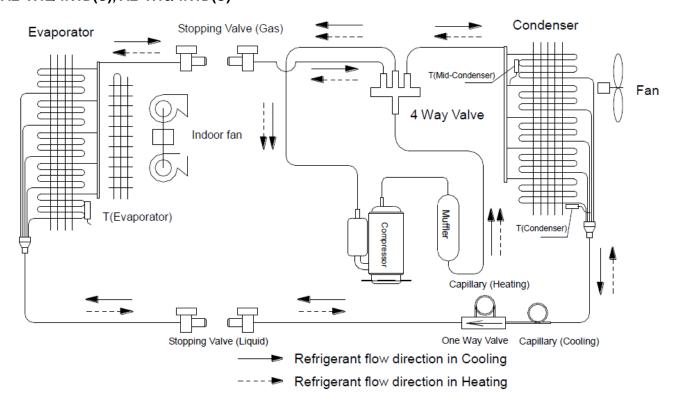

Cooling circle:

the Compressor inhales the low-temperature and low-pressure refrigerant vapor from the evaporator, and vapor be turned into high-temperature and high-pressure gas then enters into condenser, the high-temperature and high-pressure refrigerant gas and outdoor air make heat exchange in the condenser, the compressed vapor is then cooled by heat exchange with the outside air, so that the vapor condenses to be a high-temperature and high-pressure fluid, and then through capillary throttling to cooled, low pressure, then the liquid enters into the evaporator and two-phase of gas and liquid refrigerant in the evaporator completely evaporate, thereby cooling the indoor air; from evaporator the vapor is inhaled into compressor again, so it runs continuously cycle to cycle, cooled air is continuous supplied to the air-conditioned area though Duct by fan motor.

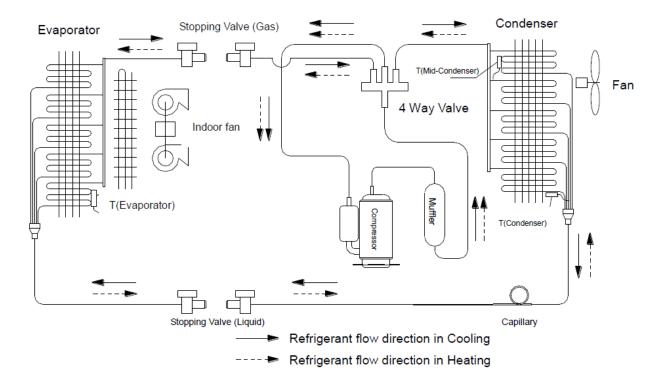

Heating cycle:

It is the contrary cycle of cooling cycle, at this moment the 4-way valve changes direction, and make refrigerant flow to direction changer, that is, the vapor discharged from the compressor enters into the indoor heat exchanger to condense, the condensation of refrigerant after the capillary expenditure, evaporates in the outdoor heat exchanger, and then inhaled by the compressor after evaporation, so it runs continuously periodically , the heated air is continuous supplied to the air-conditioned area though duct by fan motor.

7. Installation

7.1 Preparation and equipments before installation

Please buy following spare parts from your local market	Besides general implements, other implements are needed		
before installation	when connecting the pipe		
Hung bolts M12, 4 pcs	Acetylene cylinders, oxygen cylinders (when longer pipe		
Truing boits W12, 4 pcs	used it should be welded)		
Drainage pipe PVC	One set pipe cut machine. (cut copper pipe)		
Conner connecting pine	Refrigerant cans, electronic balance (when longer pipe		
Copper connecting pipe	used additional gas should be charged)		
Adhaniya halt (hig aiza) E pag (amall aiza) E pag	Pressure gauges, pipe clamp, welding torch, 2B silver		
Adhesive belt (big size) 5 pcs, (small size) 5 pcs	electrode		
Heat insulation material used to connect copper pipe	Wrench 2 pcs, one of them is with adjustable torque wrench		
(PE foam material, its thickness is more than 8mm)	(42N.m,65N.m,100N.mm)		
Power cable, electrical wire between indoor and outdoor	Nitrogon gylinder (in order to provent evidetion when		
unit(Must be in accordance with the wire diameter in the	Nitrogen cylinder (in order to prevent oxidation when		
wiring diagram)	welding, using Nitrogen to replace the air)		

Select installation position of outdoor unit

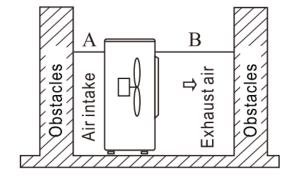

- ♦ The site shall be strong enough to bear its weight, prevent noise and vibration.
- ♦ The site shall be ensured to avoid direct sunshine, if necessary set a Havelock above the outdoor unit.
- ♦ The site shall be easy to drainage the rain water and the frost water.
- ♦ The site shall be ensured that the outdoor unit will not be covered by snow LDring the winter season.
- ♦ The site shall be ensured that the outlet is not facing the strong wind.
- ♦ The site shall be ensured that outlet air and operation noise will not affect the neighbors' daily life.
- ♦ The site shall be ensured that the outdoor unit will not be affected by the garbage and oil mist.

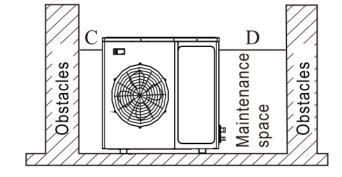

Warning:

If outdoor unit working under such environment which contains oil (including machine oil) salt(marine areas), sulfide gas (hot springs and oil refinery areas), those substance may lead to the failure work of the outdoor unit.

Maintenance and ventilation space

♦ The site shall be easy for ventilation then the outdoor unit can inhale and discharge air easily. What's more please reserve enough space for maintenance.

Note: Require A>300mm; B>1500mm; C>300mm; D>500mm

Outdoor unit installation

- ♦ Use size M10 bolt and nut to fasten the outdoor unit tightly on the bracket, keep it in the horizontal level. The suitable length for bolt shall 20mm over the base level, in order to minimize vibration please do set a rubber shock absorber.
- ♦ If the outdoor unit is mounted on the wall or on the rooftop, in order to prevent earthquake and strong wind please fasten it as tightly as possible.
- ♦ Set a drainage channel to ensure the condensing water can drain out smoothly.
- ♦ To avoid that only four angles metal sheet to support the outdoor unit.

7.2 Connection piping installation

Piping installation precaution

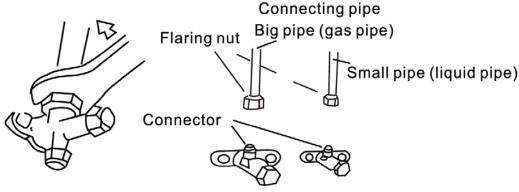

Please choose the phosphorus deoxidation seamless copper pipe as the piping.

- \Diamond If use the lengthen piping needs welding:
- Please welding before fasten the nut, when welding using nitrogen gas to replace the air in the pipe in order to prevent oxidation.
- ♦ If there are many points to be welded when installing the lengthen piping, please set a filter in the pipe(buy from local market)
- ♦ Please use nitrogen gas or air to remove the dust and water in the pipe,
- ♦Please lay out the piping according to the tend towards of the piping, but it is not allowed more than 3 times curved at the same point of the pipe(if do like this the pipe will become rigid)
- ♦ Pipe bending machine is used during the process of bending the pipe, the curvature shall not be too small or it will affect the refrigerant flow.

Piping specification selection

As to the detail selection please take reference to the cooling capacity adjust index figure during different installation situations.

Piping diameter	Tighten torque	Expanding size	Expanding shape	Paint the frozen oil
1/4in(φ6.35mm)	15-19(N⋅m)	8.3-8.7mm		
3/8in(φ9.52mm)	35-40(N⋅m)	12.0-12.4mm	RO. 4-0. 8	Paint the frozen oil
1/2in(φ12.7mm)	50-60(N⋅m)	15.4-15.8mm	900+20	
5/8in(φ15.88mm)	62-76(N·m)	18.6-19.0mm		
3/4in(φ19.05mm)	70-75(N·m)	22.9-23.3mm	,	· · · · · · · · · · · · · · · · · · ·

Piping connection

- ♦ Using expanding machine to expand accessories, the size of horn shown in the above figure:
- ♦ Paint a thin layer of frozen oil at both inside and outside part of the expanding.
- ♦ Make the expanding right to the screw thread shape connection of the indoor unit, using hands to tighten the nut then using a wrench to tighten the nut again, the tighten torque as follows figure.
- ♦ Take out the cover of the indoor unit gas valve and liquid valve, make the expanding right to the stop valve of outdoor unit, using hands—to tighten the nut then using a wrench to tighten the nut again, the tighten torque as follows figure.

Equivalent pipe length conversion

Equivalent pipe length means converting pipe elbow to straight pipe length after considerate the pressure loss.

Elbow and Oil loop conv	ersion	tablet
-------------------------	--------	--------

Pipe Dia.(mm)	Bend	Oil Loop
6.35	0.10	0.7
9.52	0.18	1.3
12.70	0.20	1.5
15.88	0.25	2.0
19.05	0.35	2.4
22.02	0.40	3.0

Equivalent pipe length L=ActualPipe length L+ Bend Qty× Equivalent pipe bend length+ Oil Loop Qty × Equivalent Oil Loop length

Sample:

ALCA-H42A5/C5 Actual Pipe length is 25 meters, Gas pipe diameter is 19.05mm. If there's 5 bends and 2 oil loops during the installation, then the equivalent pipe length should be: $L=25+0.35\times5+2.4\times2=31.5(m)$

♦ Specification of connection pipe for indoor unit and outdoor unit

Cooling Capacity(Btu/h)		12000	18000	24000	36000	48000	60000
Connection	Liquid Pipe	Ф6.35 Ф9.52		Ф9.52			
Pipe (mm)	Gas Pipe	Ф1	2.7	Ф15.88		Ф19.05	
Max. Length		15	20	30	50	50)
Max. Height (m)		10	15	15	30	30)
Max. Bend Qty		3	4	6	10	10)
Extra R410a per meter when the		0.03	0.03	0.05	0.05	0.07	7
pipe length is more than 5 meter (kg)		0.03				0.07	

Caution:

- 1. The standard Pipe length is 5m, if the pipe length is less than this then no additional charging is necessary. If the pipe length is more than this then you should charge more refrigerant into the system according to the above Charging Data
- 2. The thickness of the pipe is 0.5-1.0, bearing pressure is 3.040 MPa;
- 3.If the connection pipe is too long, the cooling capacity and stability would be decreased. And the more bend quantity, the resistance in the piping system would be bigger, then the cooling and heating capacity would be decreased even lead to compressor broken. We suggest you to use the shortest connection

pipe according to the pipe length parameter in this manual.

Emptying or vacuum

Before charging the refrigerant to the system, to ensure that there is no impurities, water or non-condensable gas. So, emptying and vacuum operation should be carried out.

- ♦ Vacuum: when process this operation please be sure that the connection pipe is tightened up.
- 1. Screw off the cover of maintenance valve connection, connect the pressure gauge to the connection of maintenance valve
- 2. Connect the vacuum pump to the pressure gauge, turn on the vacuum pump and pressure gauge to process the vacuum operation toward the indoor unit and piping, while to ensure that the absolute pressure is no less than 50Pa after this operation.
- 3. Turn off the pressure gauge and vacuum pump to keep the pressure in the same level in 20 minutes.
- ♦ Emptying: when process this operation, please disconnect the high pressure valve with liquid valve.
- 1. Connect the gas valve of the stop valve to the thimble side of the rubber hoses, the other side of rubber hoses should be connected to the refrigerant tank.
- 2. Open the refrigerant tank valve, using the refrigerant inside the tank with high speed to empty the air in the indoor unit and the connection piping. When the outlet air becomes mist (it feels cold by touching it), then the air is emptied.
- 3. When ensure that the air is emptied, connect and tighten the high pressure valve of outdoor unit stop valve and liquid side connection pipe, keep this state more than 10 seconds.
- 4. Use soapy what to test each connection junctions (including lengthen piping welding junction)
- 5. Confirmed that there is no leakage, turn off the valve of refrigerant tank, take down the rubber hose as well.
- ♦ Turn on the high-low pressure valve of the outdoor unit.

After vacuum and emptying, screw back the cover of the maintenance valve of outdoor unit low pressure valve, screw off the high-low pressure valve of the outdoor unit (note: shall totally turned off). Connect the refrigerant to the system.

Heat insulation package of piping

♦ Use heat insulation material with good insulation performanCF to wrap the pipe.

Incorrect	Correct			
Gas pipe and liquid pipe should not be put together to insulate	Insulate the gas pipe (cooling only)	Insulate the gas pipe and liquid pipe		
Gas pipe Liquid pipe Liquid Heat insulation Liquid Liquid Liquid Liquid	Gas pipe id pipe Gas pipe Gas pipe Heat insulation	Heat insulation Liquid pipe Binder		

Notes

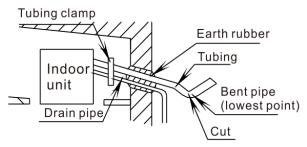

Drainage pipe and connection piping should be wrapped by heat insulation material respectively or there will be dew or leakage

During the high temperature working environment, our air conditioner is proved my dew conditioner experiment. But if it keeps on working during the high humidity (the dew temperature is more than 23°C) environment which may lead to water leakage, in such condition please use following additional insulation material:

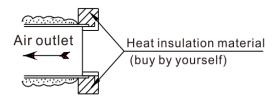

- ♦ Glass fiber insulation material with the thickness between 10~20mm can be used.
- ♦ The part of indoor unit which get in touch with the back side of ceiling should pasted with insulation material.
- ♦ Besides the previously more than 8mm thick insulation material, connection piping (both gas pipe and liquid pipe), drainage pipe should be wrapped by additional 10~30 mm thick insulation material.

To seal the hole on the wall.

- ♦ To prevent rainwater or other foreign bodies from entering the room and air-conditioner after installing the tubing and drain pipe, the gap between wall hole and tubing, drain pipe and electric wire should be sealed with mastic, sealant rubber or putty, or poor performance or leakage will result
- If the outdoor unit is higher than indoor unit, tubing should be bent to ensure that the lowest point of the tubing is lower than the wall hole to prevent rainwater entering the room or air-conditioner along the piping system.

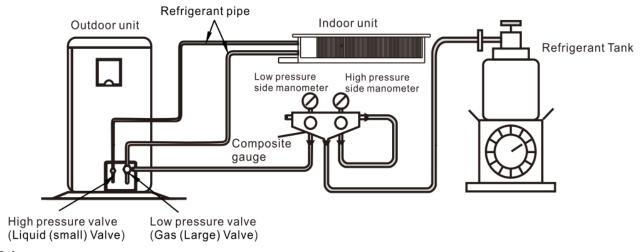

Make a cut in the heat insulation materials of bent pipe (for drainage)

Additional refrigerant charge

When pipe length exceeds 5m, please add refrigerant according to the table below:

Connection	Piping	Additional refrigerant	
piping	Gas pipe	Liquid pipe	charge amount (kg/m)
Piping between indoor and outdoor unit	φ9.52×0.75mm	φ6.35×0.75mm	0.02
	φ12.7×1mm	φ6.35×0.75mm	0.03
	φ15.88×1mm	φ9.52×0.75mm	0.05
	φ19.05×1mm	φ9.52×0.75mm	0.07
	φ19.05×1mm	φ12.7×1mm	0.09

Others

Users to install the air conditioner at site shall ensure that the oil can return to the unit smoothly.

- ♦ Horizontal pipes should incline toward the outdoor unit using a 20:1 slop.e
- ♦ If there is a height difference between the indoor and outdoor unit, oil loops should be installed in the inter connecting gas (large) pipe;

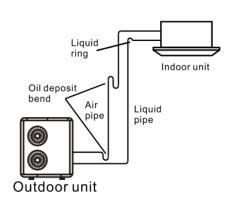

When the vertical pipe height difference is less than 5 meters, an oil loop should be installed at the bottom of the gas (large) pipe;

When the vertical pipe height difference is more than 5 meters, then for every 5 meters an oil loop must be installed at the bottom of the gas (large) pipe, and a short loop (liquid ring) should be installed at the exit of the indoor unit liquid (small) pipe;

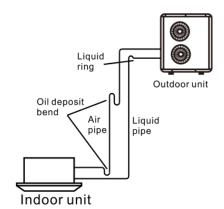

When the connecting gas pipe vertical height difference is less than 5 meters but the constant rise distance is too long, an oil loop should be installed in the gas (large) pipe every 10 meters.

♦ When the outdoor and indoor units are at the same elevation, the oil deposit bend and liquid ring do not need to be installed, if the horizontal connecting pipe length is less than 10 meters.

When the horizontal connecting pipe length is more than 10 metres, install an oil loop in the gas (large) pipe every 10 metres.

When the installation position of indoor unit is higher than that of the outdoor unit.

When the installation position of indoor unit is lower than that of the outdoor unit.

Note:

This chart is for explanation purposes. An actual installation will differ from this according to the site conditions. When making an oil trap the radius of the bend should be between 1.5 and 2 times the pipe diameter.

7.3. Electrical connection

7.3.1 Electrical connection precaution

	Installation of electric items must be carried out by qualified, professional technicians. An isolated circuitry
	should be fixed with whole-pole disconnection devices, which is with at least 3mm gap of touch point
	Power supply and indoor to outdoor connection should use special cable. Providing the necessity of
	installation or replacement, the professional technician of service store appointed by manufacturer must
	be required, while self-operation by users is prohibited.
	In case of any electric shock accident, the creepage protection devices /power supply on-off and breaker
	must be required with power supply.
Warning	The specification of fuse for single phase control board is F5AL 250V, while for 3 phase control board,
	both indoor and outdoor unit, it is F3.15AL 250V。
	Machine must be earthed surely. If not, it'll be probably caused creepage.
	Equivalent 227IEC53(RVV) type of power cord of GB5023 or the excelled must be required. The cords
	should be fixed properly against broken, while ends/joints of cords is under outside force. Improper
	connection or fixation will cause disaster like fireetc. Equivalent 245IEC57(YZW) type of power cord of
	GB5023 or the excelled must be used as connection line of indoor and outdoor.
Notice	The earth line is neither allowed to connect to gas pipe, water pipe or circuitry of telephone or lighting rod,
Notice	nor to the earth line of other devices.
	Please fix power supply cord and connection wires of indoor and outdoor, in accordance with circuit
	diagram
Others	Fix the cords into terminal boards properly and safely with cable fixation tools to avoid any danger caused
Officis	by the power cord under outside forces.
	After fixation, use bind tape (affixed) to bind wires avoiding any collision with other components like
	compressor, copper pipesetc

7.3.2 Electrical connection Wiring diagram of indoor & outdoor, refer to the section of part 1 Recommendation of power supply cord

Power supply:220V-240V~,50Hz

Cooling capacity (Btu/h)	Model	Power supply spec.	Power supply side	Power supply cord	Connection wires
(Dta/TI)	ALCA-H12/4R1AA	opos.	0.00	55.4

	ALMD-H 36/4R1				

Power supply 380V-415V~,3N,50Hz

Cooling capacity	Model No.	Power supply	Power supply cord	Power supply cord	Connection
(Btu/h)	Model No.	spec.	of indoor unit	of outdoor unit	wires
36000	ALCA-H36/5R1AA ALCF-H36/5R1C ALMD-H36/5R1D ALCA-H48/5R1AA	Outdoor unit 380-415V 3N~50Hz Indoor unit 220-240V~50Hz Indoor and outdoor input separately	3×1 mm²		2×1 mm²
48000	ALCF-H48/5R1C ALMD-H48/5R1D			5×4mm ²	
60000	ALCA-H60/5R1AA ALCF-H60/5R1C ALMD-H60/5R1D				

Notice:

- Above mentioned power supply cord is the cable which connect air on-off of indoor to indoor/outdoor unit. Power supply cord of indoor/outdoor unit is the power supply cable connecting indoor and outdoor unit
- ♦ The section area of power supply cord core is minimized one. To avoid voltage pressure dropped down, while longer power supply cord needed, the section area should be enlarged for one gauge.
- ♦ The connection wires to indoor unit is the cable of 27IEC53(RVV) type, 300/500V; while the connection wires to outdoor unit and the connection wires from outdoor to indoor unit is the multi-end of cable (neoprene) of 245IEC57(YZW) type, 300/500V. if the single core with double skin type of cable is chosen for installation,, please choose 1# gauge of section area and wrapped with special jacket for

electrician.

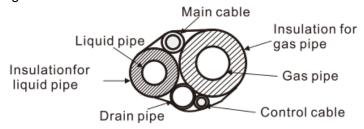

♦ All of the ceiling/floor type unit is without accessorial electric heating

7.3.3 wire connection

Remove electric control box cover of indoor unit, connect the wires in accordance with the electri diagram mentioned on the back of the cover. The wire ends must be tightly fixed into terminal boards without ease. The earth wire must be fixed into appointed position.

Outdoor wire connection

- ◇ Remove the electric item cover, which is positioned in the right side of outdoor unit, connect the wires in accordance with the electric diagram on the back of the cover.
- ♦ Be sure that pressing the wires tightly with the terminal boards while it through the board, the wire ends must be tightly fixed into terminal boards. The earth wire must be fixed into appointed position.
- ♦ After all the wire connected, bundle connection pipe, connection wires and drainage pipe with strips like mentioned drawing below:

Notice:

- Compressor of AL-(H)36/5R1 (U), AL-(H)48/5R1 (U), AL-(H)60/5R1 (U) are 3 phase power supply with
 phase sequence protection in its outdoor control board. Please be careful with wire connection.
- ♦ Be sure do't make the drainage pipe flat while bundled.

7.4. Commissioning

After installation, machine can be started commissioning.

Check installation condition

- Check indoor/outdoor unit installation and wire connection in accordance with the requirement of service manual.
- Check the power supplying, diameter of wires, air on-off and make it sure that the items can be matched with machines and, earth wire connection safety.
- Check air inlet/outlet duct and make it sure that the items is clean, operating smoothly.

Commissioning

- ★ During winter, the first run of performance should be supplied power 8 hours in advance to warm-up the crankcase.
- ★ During winter, while after 8 hours power off, the performance test should be 2 and half hours power on later:
- ◇ Power on, run machine with cooling mode.
- After 3 minutes compressor protection, check if there is normal cooling air come from indoor unit and if there is abnormal noise come from indoor/outdoor units
- ♦ Configure the mode with "fan" and check if there is high air come from indoor unit.
- Operate "swing" mode, check if the louver is properly swaying.
- Press the other buttons on the remote controller and check if the complete unit is on proper working

condition

- ♦ Operate machine 1 hour with "cooling" mode and check if the drainage system is on proper condition
- ♦ Switch the mode for "heating" and check if there is warm air come from indoor, if there is abnormal noise come from indoor/outdoor units
- ♦ After confirmation of normal working condition, press the "on-off" to stop running machine.
- ♦ Then and there, train the end users with operation, maintaining and special notice.

7.5. Compressor freezing oil brand and standard oil charge

Outdoor model	Brand	Compressor Model	Compressor Lubricating Oil Model	Oil charge (cm ³)
AL-H12/4R1D(U)	HIGHLY	ASL150UV-C7LU	HAF68D1	450
AL-H18/4R1D(U)	HIGHLY	ASL205UV-C7EQ	HAF68D1	480
AL-H24/4R1D(U)	HIGHLY	ASH286UV-C8DU	HAF68D1	570
AL-H36/4R1 (U)	HITACHI	ATH420MV-C9EU	HAF68D1	840
AL-H36/5R1D(U)	HIGHLY	ATH420UC-C9EU	HAF68D1	840
AL-H48/5R1D(U)	HIGHLY	ATE498SC3Q9RK1	HAF68D1	1600
AL-H60/5R1D(U)	HIGHLY	ATE590SC3Q9JK	HAF68D1	1850

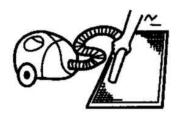

7.6 Daily maintenance

Clean inhaler

- ♦ Before cleaning the filter, ensure the unit is switched off and the power is off;
- ♦ Forbidden to use water clean the filter, it will hurt PCB or get an electric shock;
- ♦ When cleaning filter net, be sure you are standing steady, if you use ladder or others, please be careful.

Washing filter net

- ♦ Use vacuum or water to clean the net;
- ♦ In order to ensure the best performance from your air conditioner clean the air filter regularly
- ♦ We recommend cleaning once a month or more frequently if required.
- ♦ When the filter is very dirty it can be washed in detergent and hot water (below 45°C);
- ♦ Ensure the filter is fully dry before reinstallation to avoid risk of electric shock or short circuiting;
- ♦ Do not dry the filter using direct sunlight;

Check at the beginning of each season

- ♦ Check whether there are no physical obstructions at the air inlet or outlet of either indoor or outdoor unit;
- ♦ Check whether there are some garbage at the water outlet;
- ♦ Check whether electrical cables are in good condition, particularly the earth cable;
- ♦ When power on, check weather letters display on the screen of the wired controller.
- ♦ When working in winter, must connect power for 8 hours before switch on unit.

Check at the end of service season

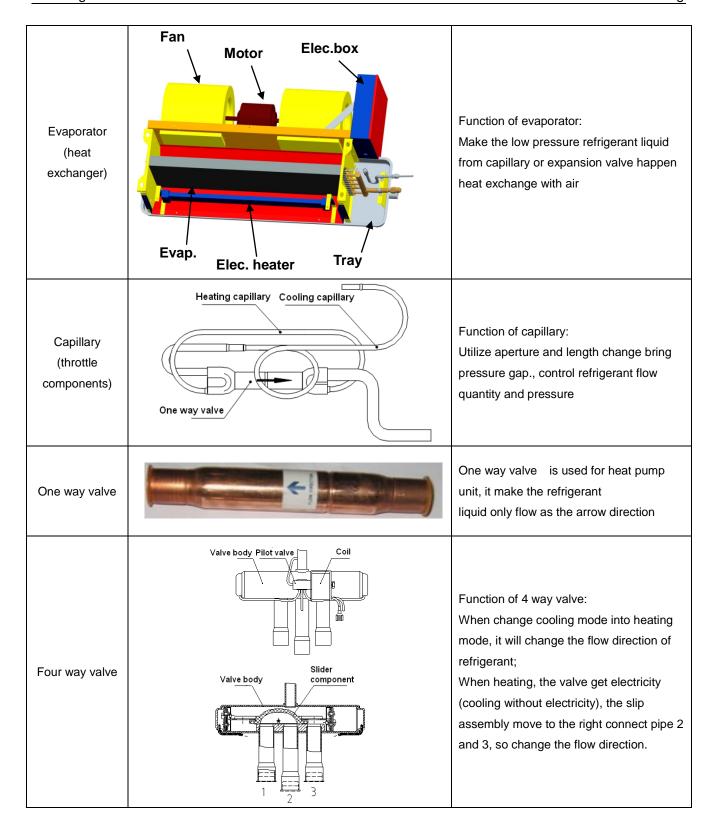

- ♦ Operate for 2 3 hours under the ventilation condition; remove the moisture of the indoor unit.;
- If not use air conditioner in a long time, please close the power to save energy, the letter will disappear on wired controller;
- ♦ Take the batteries out of remote controller;
- Suggest that use dustproof to cover the outdoor unit.

Part 4 Trouble shooting

1.Main components of air conditioner	113
2.Electrical system main components	116
3.Poor efficiency explanation	118
4.Failure phenomenon	119
5.Electric components malfunction inspection	120
6.Failure code display	121
7.Failure analysis	123

1.Main components of air conditioner

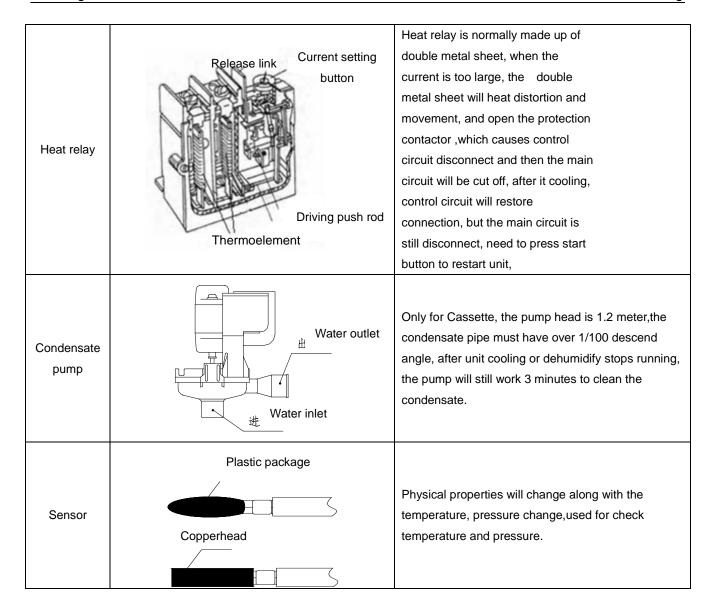

Appellation	Figuration and inner configuration	Instruction
Rotary compressor	Seal connector post Rotor Stator Upper cylinder cover Air cylinder Piston Under Magnet cylinder cover Number Magnet cover	The function of compressor: after refrigerant evaporate in evaporator, compress the low temp and low pressure refrigerant gas, make the gas become high temp and high pressure gas, and then send the gas to condenser, make the refrigerant cycle, in this series products,
Scroll compressor		all the compressors are complete hermetic compressor, in which motor and compressor are together.
condenser (heat exchanger)	Condens Fan motor Compressor	The function of condenser: Make the high temp and high pressure refrigerant gas discharged by compressor become liquid [make the gas heat exchange with air], (mark: when heating, condenser become evaporator)

Stop valve		Function: To stop or release refrigerant, only on/off, can't adjust or throttle
Muffler	Inlet Casing Outlet	Function: Eliminate the system noise
Gas and liquid separator	Inlet Outlet Casing Oil return hole	Function: Separate liquid and gas refrigerant, to protect the compressor

2. Electrical system main components

Appellation	Il system main components Figuration and inner configuration	Instruction
PCB		Function: Via program to control the relay, make every components on/off according to temperature and pressure variety, so to realize automatic control
Fan motor	Stator Rotor Motor casing Connecting wire	Function: Drive the fan, make the indoor and outdoor unit have heat exchange with air.
Pressure switch		Function: To avoid the air conditioner work in a abnormal pressure, making the air conditioner work safety.
Capacitor		Induce the single-phase motor produce gyre magnetic field, connect with the accessory winding, and participate in the operation.
AC Contactor	Hornally open contact Hornally open contact Hornally closed contact Hornally open contact Hornally open contact Attraction coil	When AC contactor's inner magnetic loop without power, the counter force of spring and the weight of armature core will make the main connector disconnect, when the magnetic loop with power, it will make the main connector connect, the power is on, accessories contactor will act.

3. Poor efficiency explanation

During the process of using air conditioner, some phenomenon seems to be malfunction but actually not. Thus when cooling effect does not achieve to your expectation, the following factors have to be ruled out

Phenomenon	Causing explanation
	When the outdoor temperature is higher, more heat penetrates into
High outside temperature and too many	indoor space, which increases the cooling load of AC. If there are too
indoor individuals, even air conditioner runs at	many individuals(for example 10 individuals) and every individual gives
full-load operation, the wind blowing out from	off 120W, totally 1200W, this will running out of half of AC cooling
air outlet is cold, but it is difficult to lower the	capacity, and the unit's cooling capacity this time is far from enough,
indoor temperature, this is not malfunction.	indoor temperature is hard to lower down. It is normal phenomenon and
	do not mean useless of AC.
Power voltage is too low, causing AC uneasy	It is not malfunction, need to find out the causing, if the causing is the
to start and shut down after starting, or fuse	electricity net voltage is too low, user should load a power manostat to
be burned out etc.	keep voltage between 220V-380V for AC normally running
Select high wind speed but indoor	It is because air filter is too dirty or blocked making cooling capacity fail to
temperature still at high side, air flow from the	be brought by air flow, causing cooling capacity inadequate. Take out
air outlet is too weak.	filter and wash, the problem will be solved.
Select high wind speed, the vibration and	Fan runs at high speed, severe vibration and sound of unit is normal
sound of unit are severe.	phenomenon
Temperature controller adjusts improper and	
max cooling capacity is not utilized	Adjust the temperature controller, and problem will be solved.
completely, thus indoor temperature can't	Adjust the temperature controller, and problem will be solved.
lower down.	
As for Heat pump air conditioner heating	The lowest temperature is 7°C when begins below this temperature
effect is not ideal during cold winter, this is	The lowest temperature is -7° C when heating, below this temperature
normal phenomenon.	unit cannot heat effectively.
Improper installation will lead to indoor	It is necessary to adjust AC installation position
temperature uneven or bad cooling effect.	It is necessary to adjust AC installation position

4. Failure phenomenon

Phenomenon	Causing explanation		
Mirage comes out from indoor unit	When the cold air from AC cools the indoor air		
Noise	 When air conditioner stops running, there will be some noise, and this is because the refrigerant flows contrarily. AC expand or shrink according to temperature, causing harsh sounds Liquid sound is from refrigerant flowing 		
Sometimes, the room is smelly	The AC itself will not be smelly, if it is smelly, it is because environment smell accumulated Solution: clean the filter		
when heating, there is no wind at the beginning of starting unit	 It is to prevent cold air blowing, please be patient The unit has auto-restart function, when it is repowered again, unit will run according to the mode which is set before the power off. (Note: default is closed) 		

5. Electric components malfunction inspection

No	Component	Inspection methods				
NO	name	inspection methods				
		Using multi-meter ohm phase, there is correct resistance value among windings (single				
1	Compressor	phase compressor refers to specification, three phase compressor resistance				
		approximately equal), resistance of winding should be infinite.				
		1. 1Check if any connection part of PCB loosen or drop off, printed tinsel and				
		components have any burn, fade, breaking off or aging phenomenon, all joints exist				
2	Control board	short circuit phenomenon etc.				
_	Control board	2. Test the circuit board system in the term of voltage, pulse on, resistance variation,				
		by using testing meter.				
		3. Judge the output and input is normal or not according to electric principle diagram				
		4. Press the contactor by hand, the contactor reacts immediately and without				
3	Contactor	question				
3	Contactor	5. The contacting point of contactor has no burn and melt phenomenon				
		6. The winding has resistance value below 1000, but cannot be nil or infinite				
4	4-ways valve winding	The winding has resistance value below 1000, but cannot be nil or infinite				
		7. No expansion phenomenon apparently				
		8. Measure capacitor by using capacitor phase of multi-meter(if the multi-meter has				
5	Capacitor	no capacitor phase, use ohm phase, contact the two terminal of meter to two feet of				
3	Capacitor	capacitor, and quickly switch positive pole and negative pole and reconnect, the				
		resistance should display from nil to infinite quickly. The resistance can't change is				
		always nil or infinite).				
		Using multi-meter to measure resistance, find out temperature according to				
6	Sensor	resistance table, the temperature should accord with sensor temperature.				
		10. Resistance cannot be nil or infinite				
		11. No burning trace apparently				
7	Motor	12. Using multi-meter ohm phase, there is correct resistance value among windings				
•	(single phase compressor refers to specification, three phase compressor					
		approximately equal), resistance of winding should be infinite.				

6. Failure code display

When air condition has failure, the timing lamp on light board of controller will display different code according to different failure case.

6.1 Unit failure code for unit power supply is 220-240V

Failure causing	Display mode 1 (indication lamp on display lamp board)	Display mode 2 (wired controller)	Display priority	Phenomenon
Communication failure	none	E5	1	shutdown
Drainage system failure	Timing lamp flash 4 times/8s	E4	2	shutdown
Phase failure, phase-loss or low voltage failure	Timing lamp lash 6 times/8s	E6	3	shutdown
Indoor temperature sensor abnormal (TA)	Timing lamp flash 1 times/8s	E1	4	shutdown
Indoor coil sensor abnormal(TE)	Timing lamp flash 2 times/8s	E3	5	shutdown
Outdoor coil sensor abnormal(TW)	Timing lamp flash 2 times/1s	E2	6	non-stop
Indoor heating over-load protection		None	7	shutdown
Defrosting(not failure)	Operation lamp flash	None	8	non-stop

6.2 Unit failure code for unit power supply is 380-415V

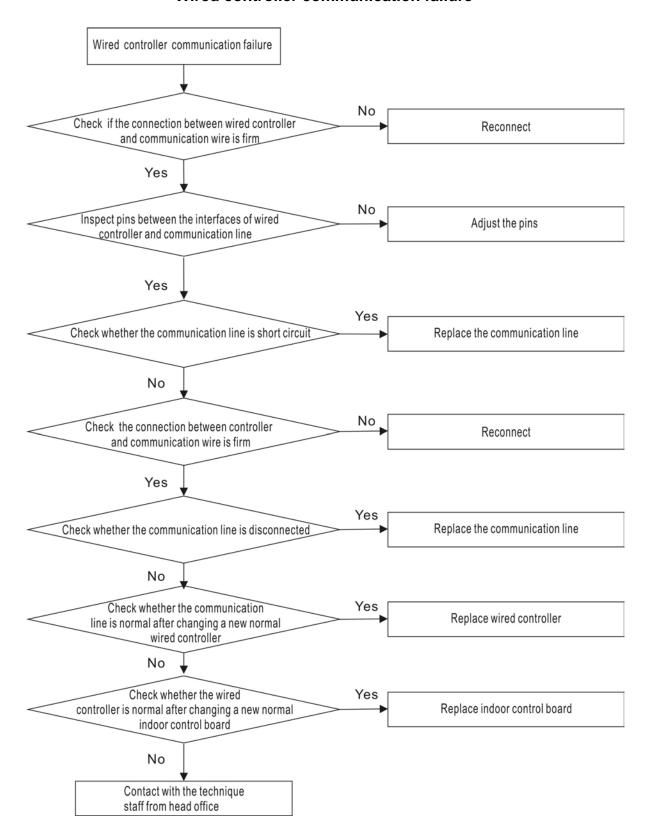

Failure causing	Display mode1 (indication lamp on display lamp board)	Display mode1 (failure lamp on control board)	Display mode3 (wired controller)	Display priority	Phenomenon
Communication failure	Flash 5 times and go out 2S	Flash 2 times and go out 2S	F1	1	shutdown
Wired controller communication failure	_	_	E5	1	shutdown
Drainage system failure	Flash 4 times and go out 2S	_	E4	3	shutdown
Outdoor protection(Phase failure)	Flash6 times and go out 2S	-	E6	2	shutdown
Outdoor protection (discharging over-temperature)	Flash 10 times and go out 2S	Flash 10 times and go out 2S	EA	7	shutdown
High pressure protection	Flash 9 times and go out 2S	Flash 1 times and go out 2S	E9	6	shutdown
Low pressure protection	Flash 9 times and go out 2S	Flash 3 times and go out 2S	E9	6	shutdown

Indoor temp. sensor abnormal(TA)	Flash 1 times and go out 2S	_	E1	4	shutdown
Indoor coil sensor abnormal(TE)	Flash 3 times and go out 2S	_	E3	5	shutdown
Outdoor coil sensor	Flash 2 times and go out	Flash 2 times	E2	8	non ston
abnormal(TW)	2S	and go out 2S	EZ	0	non-stop
Outdoor condensate temp.	Flash 7 times and go out	Flash 7 times	E7	9	non eton
Sensor abnormal(TL)	2S	and go out 2S	<i>□1</i>	9	non-stop
Discharging temp. sensor	Flash 8 times and go out	Flash 8 times	E8	10	non oton
abnormal(TP)	2S	and go out 2S	⊏0	10	non-stop

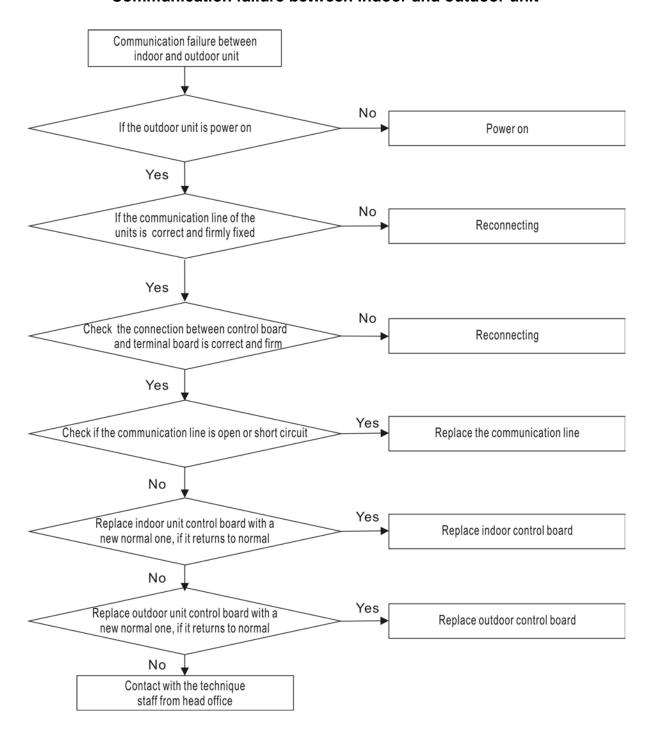

Note: When correct signal has not been received by wired control or main control board in 2 consecutive min, then the unit turns off and indicates relative failure code, once communication renew and failure code disappears automatically.

7. Failure analysis

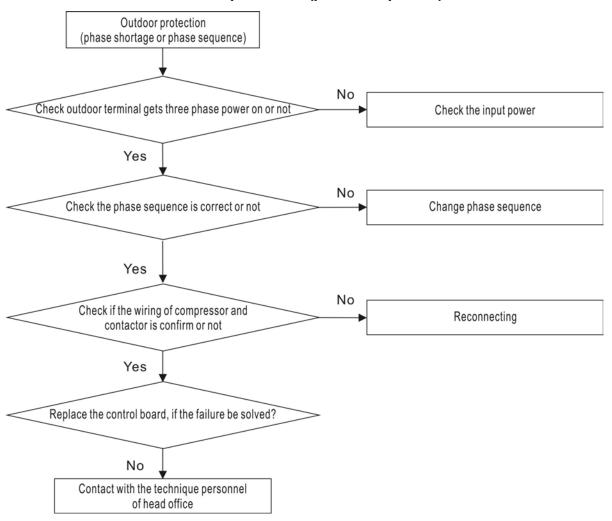

Wired controller communication failure

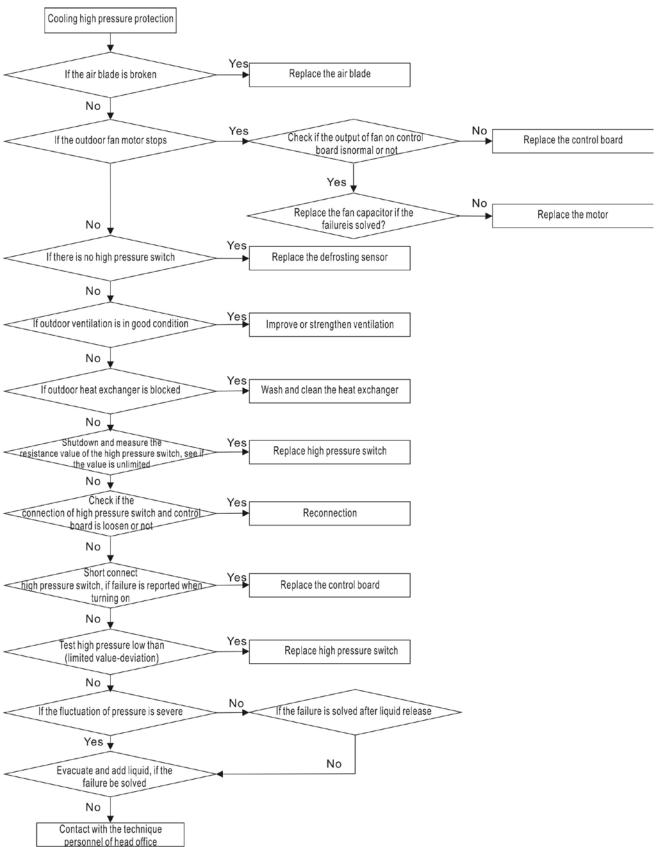

Communication failure between indoor and outdoor unit

Outdoor protection(phase sequence)

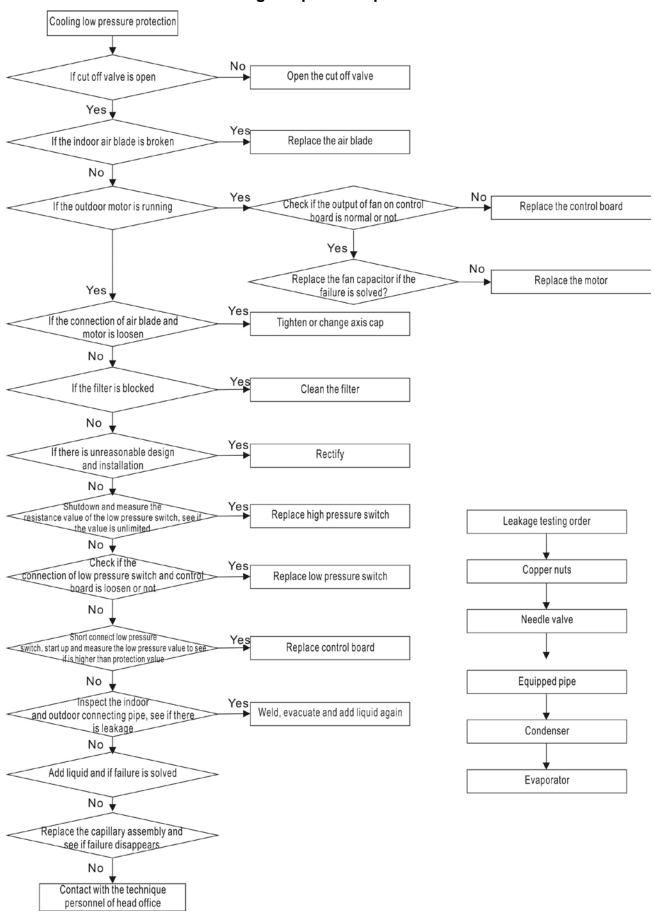

Cooling high pressure protection

Heating high pressure protection

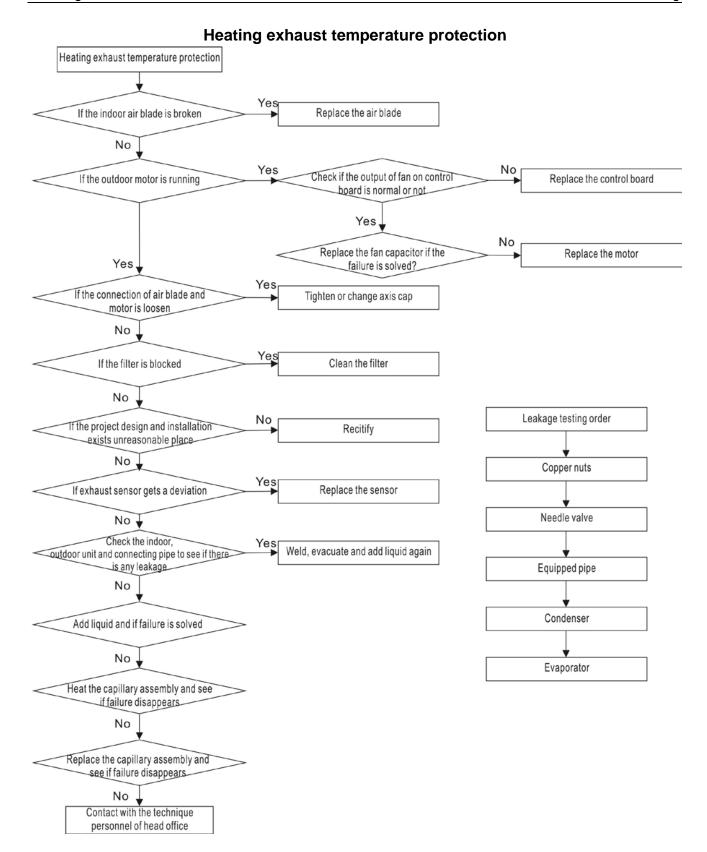

Cooling low pressure protection

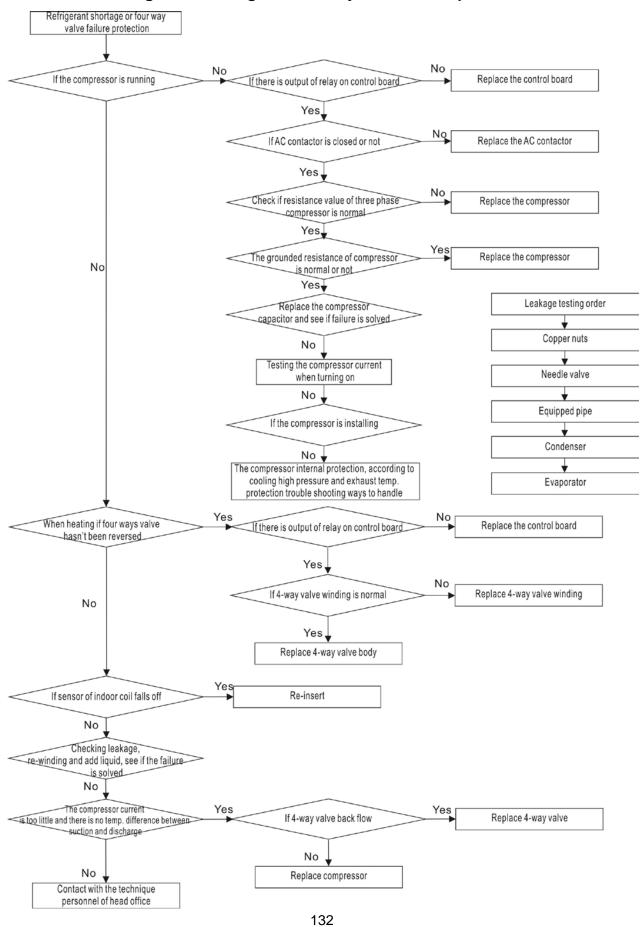

Heating low pressure protection Heating low pressure protection Νo Open the cut off valve If cut off valve is open Yes Yes If the indoor air blade is broken Replace the air blade Νo Yes No Check if the output of fan on control Replace the control board If the outdoor motor is running board is normal or not Yes No Replace the fan capacitor if the Replace the motor Yes failure is solved? Yes If outdoor ventilation is in good condition Improve or strengthen ventilation No If outdoor heat exchange is blocked Clean the heat exchanger No Shutdown and measure the Yes Replace low pressure switch resistance value of the low pressure switch, see if the value is unlimited No 🜡 Check if the connection of low pressure switch and control Reconnect Leakage testing order board is loosen or not Yes⊌ Short connect low pressure Switch, start up and measure the low pressure value to SEE if is higher than protection value No Copper nuts Replace control board Yes Needle valve Inspect the indoor Weld, evacuate and add liquid again and outdoor connecting pipe, see if there is leakage No Equipped pipe Add liquid and if failure is solved Condenser No Heat the capillary assembly and see Evaporator if failure disappears No ↓ Replace the capillary assembly and see if failure disappears No Contact with the technique personnel of head office

Cooling exhaust temperature protection

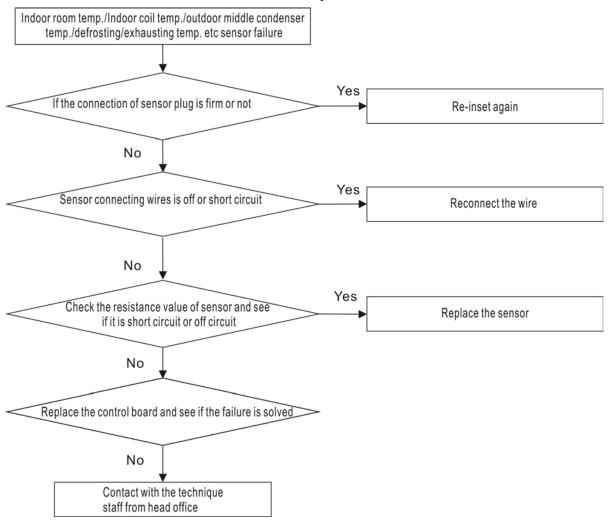

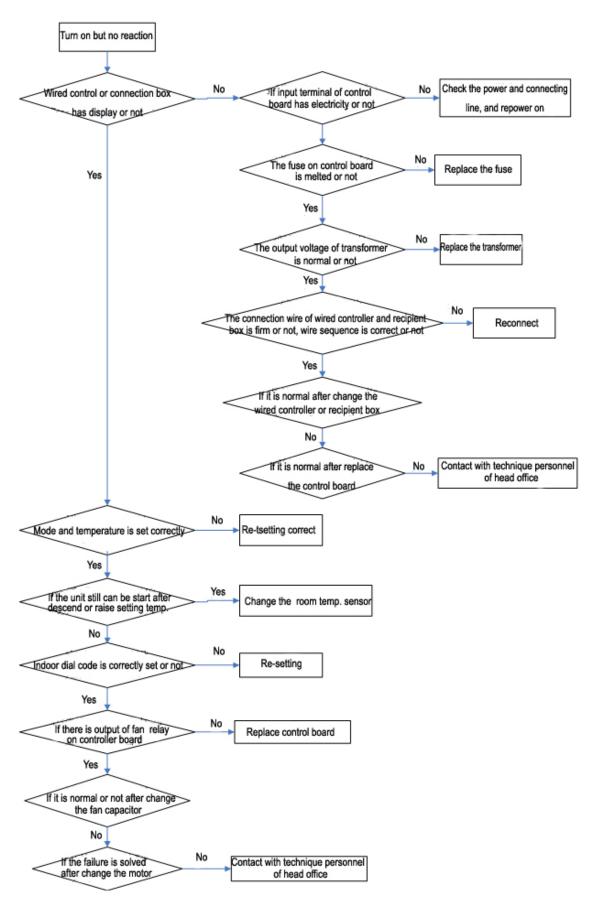

Refrigerant shortage or four way valve failure protection

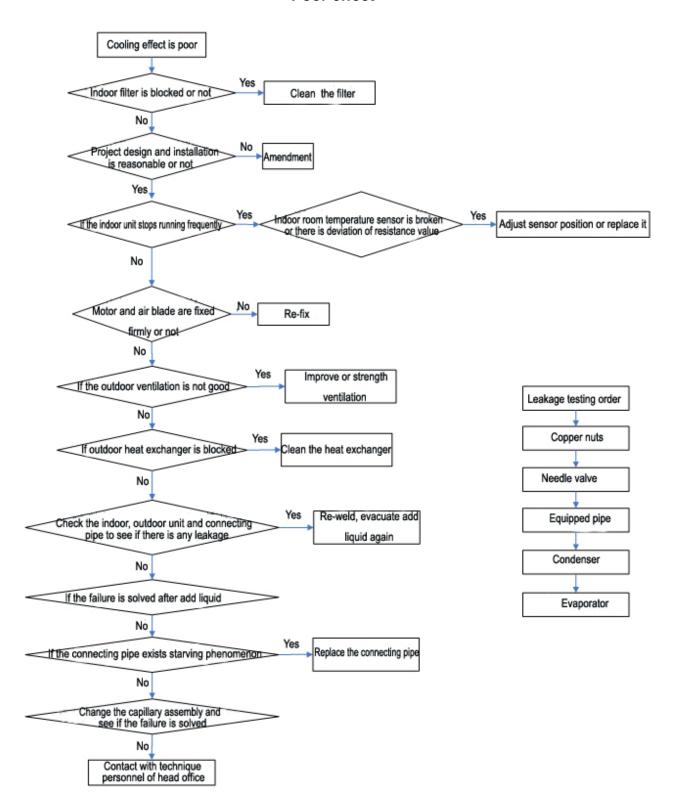

Sensor failure protection

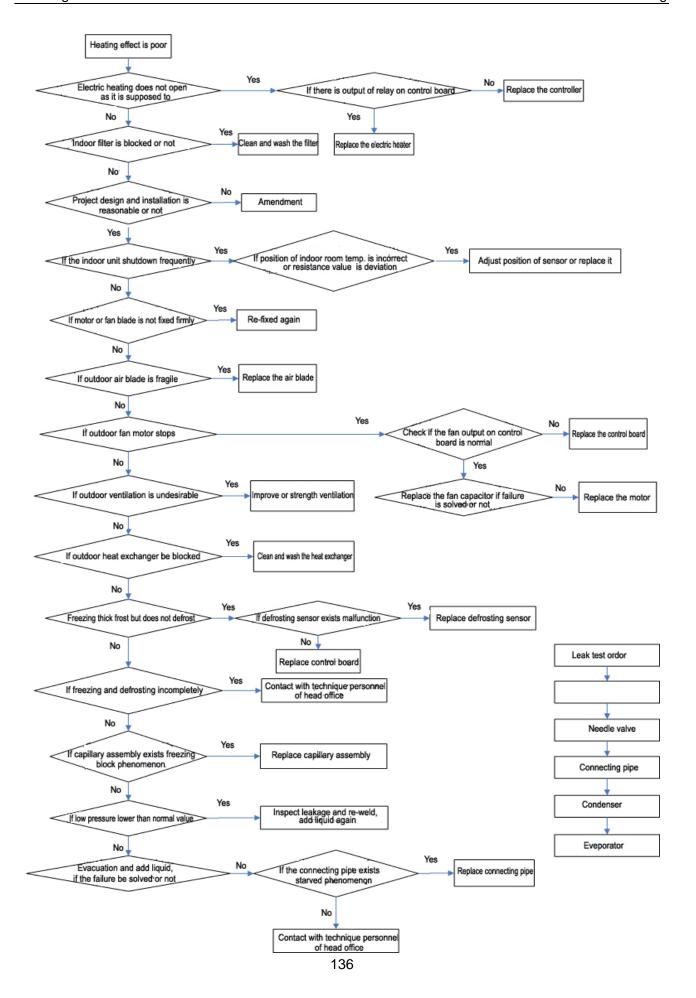

No action after power-on

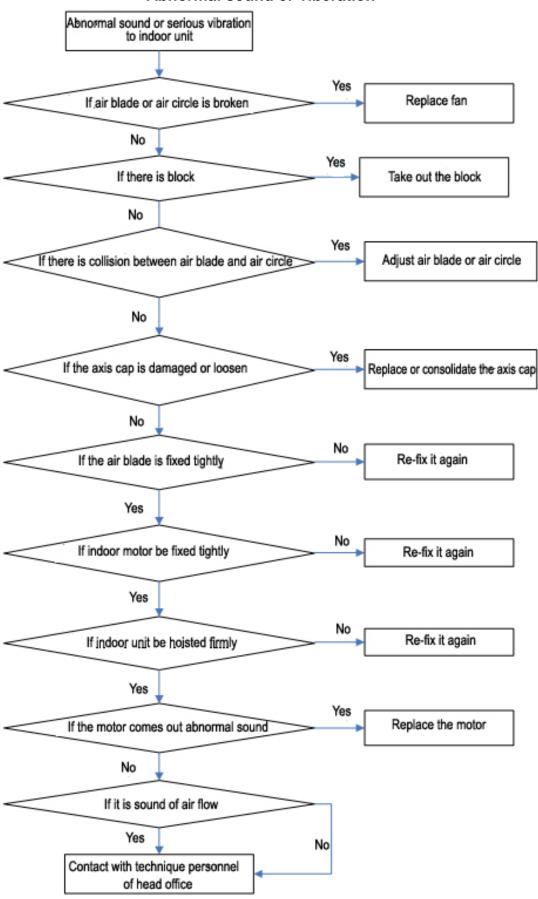

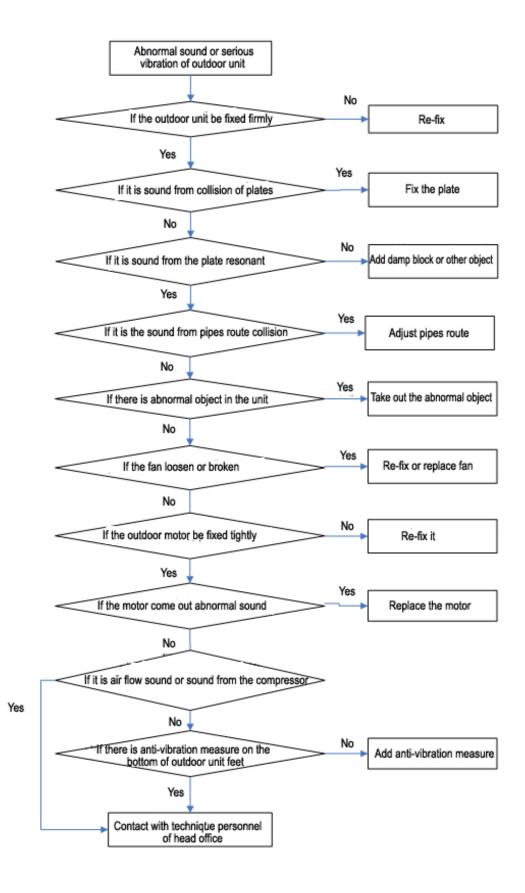

Poor effect

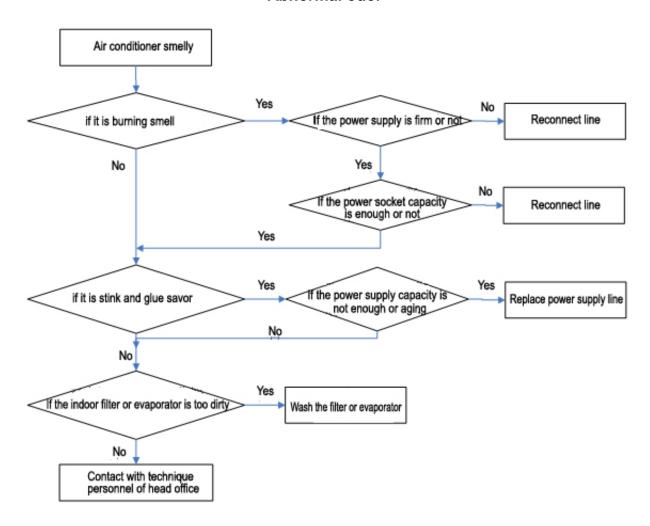

Abnormal sound or viberation

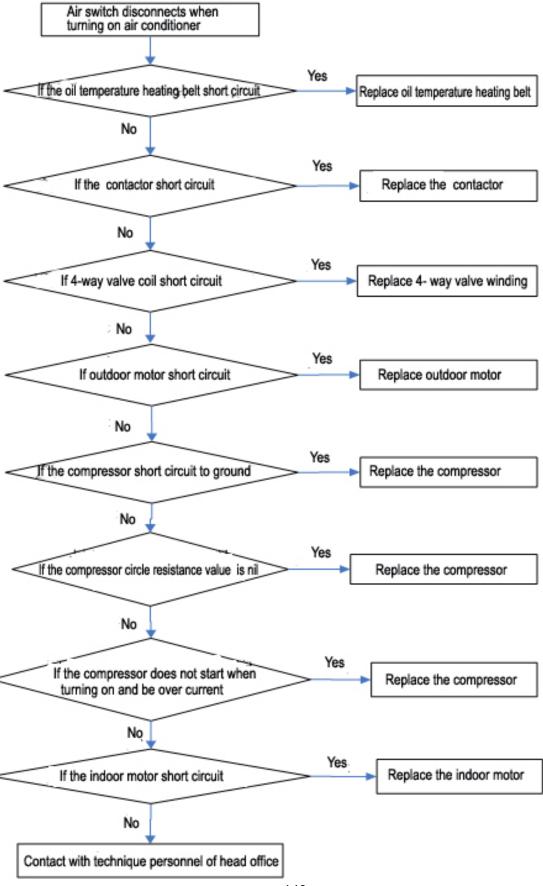

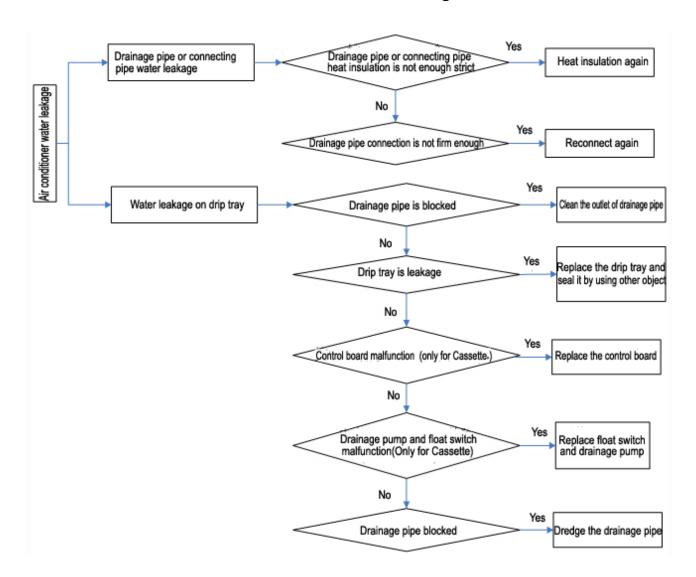

Abnormal odor

Air switch action when air conditioner starting up

Air conditioner water leakage

Part 5 Controller

1.General information	143
2.Function	145
3.Wired controller	148

1.General information

Remote controller, wired controller, display panel and receiver

Remote controller、wired controller、display panel 、receiver							
Remote controller	TO TRANSPORT AND TO THE PARTY OF THE PARTY O	Available for all models above					
Wired controller	25° M	Available for all models above					
Display panel		Available for Cassette indoor unit					
Display panel		Available for Ceiling&Floor indoor unit					
Receiver	• U • ≈ • • • •	Available for Duct indoor unit					
Note	For Cassette and Ceiling & Floor indoor unit, remote controller is standard and wired controller is optional. For Duct indoor unit wired controller is standard,remote controller is optional(remote controller receiver will be necessaryer).						

Remote controller's operation introduction

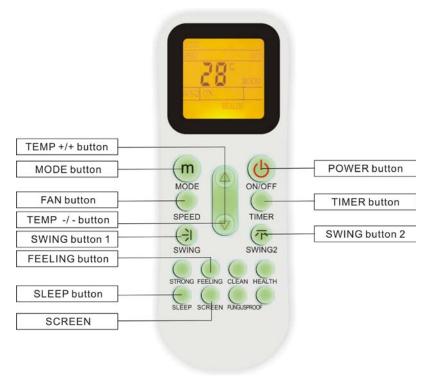

Basic condition of remote controller

Name	Figure	Basic condition for operation				
Remote controller	SET TRANSPORTERETS SET TR	1.Power source Use 2 pcs No 7 batteries,working voltage:2.0V-5.0V; 2. Signal frequency:infrared frequency 38kHz; 3. Remote distance:max working distance is7m. Key operation introduction: 1.Temperature setting range 16 °C -32 °C; 2. when heating:When indoor coil temp. is lower than request, the fan will change into low speed,. After the temp. reach to the request temp.,it will change into setting fan speed.				

2.Function

Function

Remote conntroller: K series

POWER button: Switch the unit ON/OFF.

TEMP + button and **TEMP - button**: Temperature adjustment range: 16~32

FAN button: Change the fan speed will change in turn as: Low-Medium-High-Auto

SWING button 1: Press this button for the first time when operation, it will start the up and down swing function. Push the button for the second time, cancel the swing function.

SWING button 2: Press this button for the first time when operation, it will start the right and left swing function. Push the button for the second time, cancel the swing function.

Feeing button: Press this button for setting the feeling function. The LCD shows the actual room temperature when the function set and it shows the setting temperature when the function cancelled. The function is invalid when the appliance at the fan mode.

TIMER/CLOCK button:

Clock Setting: Normally display the clock set currently (display 12:00 for the first electrifying or resetting). When press the button for 5 seconds, the time display zone will flicker, then press [+] and [-] button and to adjust hour that uses 12-hour clock including "A.M." and "P.M." time; press the button again to complete the setting.

Timer setting: Press the button to set TIMER ON/OFF, press the button then "ON" will flicker on the display screen. then press [+] and [-] button and to adjust hour that uses 12-hour clock including "A.M." and "P.M." time; press the button again to complete the setting. The "OFF" setting is the same methods.

Remark: When setting functions such as mode, temperature, air port and air velocity, display screen displays all presetting parameters and remains constant; after reaching presetting time, air conditioner will automatically start as per presetting state.

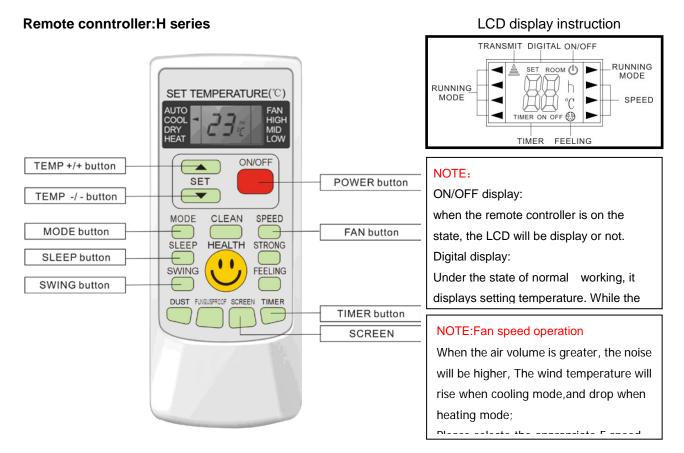

After setting timing ON and OFF function, pressing button of 【Timer/Clock】 can cancel timing setting.

SLEEP button:

- 1. Press the button to the sleeping indicator light of indoor unit flashes on;
- 2. After the setting of sleeping mode,the cooling operation enables the set temperature to increase 1°C after 1 hour and another 1°C auto matically after 1hour.
- 3. After the setting of sleeping mode,the heating operation enables the set temperature to drop 2°C after 1 hour and another 2°C auto matically after 1hour.
- 4. The air condition runs in sleeping mode for 7hours and stops automatically.

Remark: Press the mode or ON/OFF button, the remote controller clears sleeping mode away.

SCREEN button:Press the button to let the LCD display working or not by pressing the button.

POWER button: Switch the unit ON/OFF.

MODE button:Select mode , push the button one time, then the operation modes will change in turn as Auto-Cooling-Dehumidify-Heating

TEMP + button and **TEMP - button**: Temperature adjustment range: 16~32

FAN button: Change the fan speed will change in turn as: Low-Medium-High-Auto

SWING button: Press this button for the first time when operation, it will start the swing function. Push the button for the second time, cancel the swing function. (The function is available matched with the concerned unit)

TIMER/CLOCK button:

Clock Setting: Normally display the clock set currently (display 12:00 for the first electrifying or resetting). When press the button for 5 seconds, the time display zone will flicker, then press **[+]** and **[-]** button and to adjust hour that uses 12-hour clock including "A.M." and "P.M." time; press the button again to complete the setting.

Timer setting: Press the button to set TIMER ON/OFF, press the button then "ON" will flicker on the display screen. then press [+] and [-] button and to adjust hour that uses 12-hour clock including "A.M." and "P.M." time; press the button again to complete the setting. The "OFF" setting is the same methods.

Remark: When setting functions such as mode, temperature, air port and air velocity, display screen displays all presetting parameters and remains constant; after reaching presetting time, air conditioner will automatically start as per presetting state.

After setting timing ON and OFF function, pressing button of 【Timer/Clock】 can cancel timing setting.

SLEEP button:

- 1. Press the button to the sleeping indicator light of indoor unit flashes on;
- 2. After the setting of sleeping mode, the cooling operation enables the set temperature to increase 1° C after 1 hour and another 1° C auto matically after 1 hour.
- 3. After the setting of sleeping mode,the heating operation enables the set temperature to drop 2°C after 1 hour and another 2°C auto matically after 1hour.
- 4. The air condition runs in sleeping mode for 7hours and stops automatically.

Remark: Press the mode or ON/OFF button, the remote controller clears sleeping mode away.

SCREEN button:Press the button to let the LCD display working or not by pressing the button.

3.Wired controller

3.1 Basic condition of wired controller

Name	Figure	Basic condition for operation
Wired controller	Constant 188.5 minutes 188.5 m	1. Power source:voltage DC 12V; 2. Work temperature range of PCB:(-10~+70)℃; 3. Work humidity range of PCB:RH20%~RH90%;

3.2 Function

Wired controller: XK-01

ON/OFF button: Switch the unit ON/OFF.

Temp + button and Temp - button: Press the button can adjust temperature. Temperature adjustment range: 16~32 ℃.

Fan button: Change the fan speed will change in turn as :Auto-Low-Medium-High-Auto

Lock button: Press Temp + button and Temp - button meantime.

Remote receving: Receving signal of remote controller.

Notes:Virtually all functions of the wired controller are the same as those of the remote controller and you should refer to the remote controller instructions.

ON/OFF button: Switch the unit ON/OFF.

Temp +/- button: Press the button can adjust temperature. Temperature adjustment range: 16~32℃.

Fan button: Change the fan speed will change in turn as :Auto-Low-Medium-High-Auto

Swing button: Press this button for the first time when operation, it will start the swing function. Push the button for the second time, cancel the swing function. (The function is available matched with the concerned unit)

Health button: Press this button change to switch mode: Health mode.

SLEEP button:

- 1. Press the button to the sleeping indicator light of indoor unit flashes on;
- 2. After the setting of sleeping mode, the cooling operation enables the set temperature to increase 1° C after 1 hour and another 1° C auto matically after 1 hour.

- 3. After the setting of sleeping mode,the heating operation enables the set temperature to drop 2°C after 1 hour and another 2°C auto matically after 1hour.
- 4. The air condition runs in sleeping mode for 7hours and stops automatically.

Remark: Press the mode or ON/OFF button, the remote controller clears sleeping mode away.

Timer button: Press the button to set Timer ON/OFF, press the button then "ON" will flicker on the display screen. then press 【Clock +/- button 】and to adjust hour that uses 12-hour clock including "A.M." and "P.M." time; press the button again to complete the setting. The "OFF" setting is the same methods.

Remark: When setting functions such as mode, temperature, swing and fan speed, display screen displays all presetting parameters and remains constant; after reaching presetting time, air conditioner will automatically start as per presetting state.

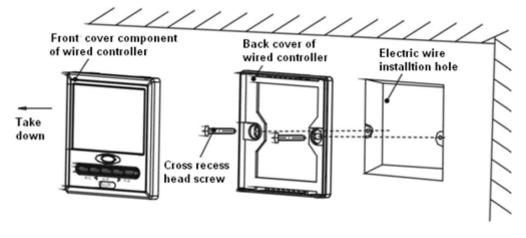

After setting timing ON and OFF function, pressing button of [Timer] can cancel timing setting.

Notes:

- 1. Time sequence of timing ON and OFF determines the order of "Timing ON-Timer OFF" and "Timer OFF- Timing ON". If the both are the same or either one is the same as time of current clock, it is invalid to press "Timer" button to confirm presetting time; after it reaches the presetting time, it will implement corresponding timing operation.
- 2. After setting time of timing ON and OFF, pressing "Timer" button can cancel timing.
- 3. Enter into time setting state of timing function; if there is no input related to time within consecutive 10 seconds, cancel the operation, return to previous state and go on with current time.
- 4. Default time of timer ON is 08:00 and default time of timer OFF is 18:00.

3.3 Installation of wired controller

- ♦ First, take apart the base panel from the wired controller.;
- ♦ According to the two installation holes on the install board, use two screws to fix the base panel to the wall as shown below;
- ♦ Ensure that the connecting cable of the controller is accessible before connecting the wired controller to the base panel.;
- ♦ Join the wired controller connection cable to the indoor unit using the cable provided.

Part 6. Sensor resistance table
